Document

baca dan create prompt untuk minta scan report dulu dari codex, supaya dapat lepas dah dapat full report kau tahu nak buat next prompt untuk mula di mana

Thought for 1m 50s >

Baik. Ini **TASK (REPORT ONLY)** untuk Codex buat **scan + report** dulu (ikut tracker: Codex kena scan full repo, follow pointer Core.conf -> Hub.conf -> implFile/implConfig, dan report tanpa edit).  ONEBOTREBUILDWORKFLOWTRACKER  ONEBOTREBUILDWORKFLOWTRACKER

 ONEBOTREBUILDWORKFLOWTRACKER

TASK: Repo scan report (active pointers + rule violations)

SCOPE

- REPORT ONLY. NO CODE CHANGES.
- Scan the FULL repo to produce a factual report of:
 - (1) what is ACTIVE at runtime (Core conf -> Hub conf -> implFile + implConfig),
 - (2) which files/keys violate locked rules (ASCII-only, zero hardcode, canonical)
 - (3) which legacy V1/V2/V3 files are still referenced by ACTIVE runtime or confi
- Do NOT modify or output any file bodies. Do NOT propose fixes. Do NOT write PR/

FILES TO OUTPUT (MAX 5, EXACT PATHS)

- 1) NONE (REPORT ONLY - do not output file bodies)

REQUIREMENTS (BULLETS)

- You MUST scan the full repo and follow ACTIVE pointers exactly:
Core/*.conf -> *Hub.conf -> implFile + implConfig.
- Identify the module registry source(s): the exact file path(s) that define whic
- For every enabled/active module, output the resolved pointer chain:
CoreConfPath -> HubConfPath -> ImplJsPath -> ImplConfPath (or equivalent).
- CV-only runtime check:
 - Report any ACTIVE impl that imports/requires V1/V2/V3.
 - Report any Core/Hub pointer that targets V1/V2/V3 (or wrapper).
- Canonical keyname contract check:
 - Locate and report the exact path of keyname.conf.txt (canonical key source).
 - For ACTIVE Impl/*CV.conf and GlobalCV.conf (and any referenced conf), list an
file path + key + line number + (if possible) the canonical key that should e
 - If a concept has no canonical key in keyname.conf.txt, mark it "MISSING CANON
- ASCII-only check:

- For ACTIVE JS/CONF/templates used by runtime (including UI templates reference file path + line number + the exact character shown safely).
- Zero-hardcode check:
 - For ACTIVE JS files, report hardcoded IDs/text/prefix/template paths: file path + line number + short excerpt (max 2 lines) showing the hardcoded.
 - At minimum, scan for patterns: "@g.us", "@c.us", phone-number-like sequences,
- Outbound pipeline check (ACTIVE runtime only):
 - Confirm all sends route through SendQueue -> Outbox -> OutboundGateway.
 - Confirm RateLimit is autobot-only and manual staff/fallback replies bypass it
 - If any direct send bypass is found, report file path + line number + short ex
- Keep evidence tight:
 - Use short excerpts only (max 2 lines) inside fenced blocks when needed.
 - Always include file paths and line numbers for every finding.

OUTPUT FORMAT (REPEAT THIS)

REPORT

A) MODULE REGISTRY SOURCE(S)

- <path> : <what it controls>
- ...

B) ACTIVE POINTERS MAP (ORDERED BY SEQUENCE)

For each enabled module:

- ModuleId: <id>
- CoreConf: <path>
- HubConf: <path>
- ImplJs: <path>
- ImplConf: <path or NONE>
- Notes: <only factual notes>

C) CV-ONLY RUNTIME VIOLATIONS (IF ANY)

- <file path>:<line> <what references V1/V2/V3> (show 1-2 line excerpt)

D) CANONICAL KEYNAME VIOLATIONS (ACTIVE CONF ONLY)

- Canonical source: <path to keyname.conf.txt>
- <conf path>:<line> key="<badKey>" (suggest canonical="<goodKey>" if known)

E) NON-ASCII VIOLATIONS (ACTIVE FILES ONLY)

- <path>:<line> char="<char>"

F) HARDCODE VIOLATIONS (ACTIVE JS ONLY)

- <path>:<line> <category: id/text/prefix/templatePath> (show 1-2 line excerpt)

G) CLEANUP CANDIDATES (REFERENCE ONLY)

- List V1/V2/V3 or legacy conf files that are NOT referenced by any active pointer
- For each, show why you believe it is unused (what you searched / which pointers

</> Plain text

Document

Thought for 3m 6s >

TAK BOLEH DEPLOY — sebab **OutboundGateway** aktif tengah point ke impl config OutboundGatewayV1.conf tapi file tu "missing on disk", jadi wiring runtime memang tak selamat untuk copy-paste live.  codex

TASK: Fix active OutboundGateway wiring + remove CV->V1 wrapper + purge non-ASCII

SCOPE

- Fix ONLY the issues proven by latest report:
 - 1) Active OutboundGatewayHub.conf points to missing OutboundGatewayV1.conf; must
 - 2) BootAnnounceCV.js is a V1 wrapper; CV runtime must not require V1/V2/V3.
 - 3) Remove non-ASCII char in active BootAnnounceCV.conf.
- Do NOT edit Start.cmd, OneBot/Kernel.js, OneBot/Connector.js, or any *Hub.js loader
- You MUST scan the repo first and follow active pointers exactly (Core.conf -> Hub.conf)

FILES TO OUTPUT (MAX 5, EXACT PATHS)

- 1) OneData/bots/ONEBOT/config/modules/Core/OutboundGatewayHub.conf
- 2) OneData/bots/ONEBOT/config/modules/Core/Impl/OutboundGatewayCV.conf
- 3) OneBot/modules/Core/OutboundGateway/OutboundGatewayCV.js
- 4) OneBot/modules/Core/BootAnnounce/BootAnnounceCV.js
- 5) OneData/bots/ONEBOT/config/modules/Core/Impl/BootAnnounceCV.conf

REQUIREMENTS (BULLETS)

- CV-ONLY RUNTIME:
 - BootAnnounceCV.js MUST NOT require/import BootAnnounceV1/V2/V3 (no wrappers).
- OUTBOUNDGATEWAY WIRING:
 - In OutboundGatewayHub.conf, set implConfig to a REAL existing file (target should exist).
 - Ensure OutboundGatewayCV.conf exists at the exact path above. If it already exists, ensure it's correct.
- CANONICAL KEYNAMES ONLY:
 - Locate the repo's keyname.conf.txt path.
 - Use ONLY canonical keys that exist in keyname.conf.txt. If you need a key that doesn't exist, output "MISSING CANONICAL KEY: <key>" with file+line evidence, and do NOT output anything else.
- ASCII ONLY:
 - Remove non-ASCII from BootAnnounceCV.conf (report found "✅"). :contentReference[oaicite:6]{index=1}
 - Ensure all 5 output files are ASCII-only. :contentReference[oaicite:6]{index=2}
- ZERO HARDCODE:
 - No hardcoded IDs, no hardcoded staff/user text, no hardcoded prefix/command words
 - If OutboundGatewayCV.js currently uses in-code default service lists, move them to a config file.

- CONF STANDARD + LOG TOGGLES:

- Every Impl/*CV.conf MUST include: moduleLog, bugLog, detailLog, traceLog (1/0

OUTPUT FORMAT (REPEAT THIS)

BOLEH DEPLOY (BootAnnounceCV.js 6:31AM).  codex

TASK: 6C Fallback Phase C (Reply MEDIA/DOC) - DISCOVERY REPORT ONLY

SCOPE

- REPORT ONLY. NO CODE/CONF CHANGES.
- Goal: produce the exact file map + minimal change plan (<=5 files) to implement "Fallback Phase C: staff reply MEDIA/DOC (quote reply -> send media/doc to cust
- DO NOT guess. You MUST scan full repo and follow ACTIVE pointers.

MUST FOLLOW ACTIVE POINTERS

- Resolve and report the active chain:
OneData/bots/ONEBOT/config/modules/Core/Fallback.conf
-> OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf
-> ImplJs (FallbackCV.js)
-> ImplConf (FallbackCV.conf)
- Also resolve the active outbound services used by fallback reply:
SendQueue / Outbox / OutboundGateway / RateLimit (which service name fallback u

REPORT REQUIREMENTS (WHAT TO OUTPUT)

A) ACTIVE FALLBACK POINTERS

- CoreConf, HubConf, ImplJs, ImplConf (exact paths)

B) FALLBACK 4x4 HANDLER MAP (EXISTING FILES ONLY)

List which handlers exist and their exact paths:

- ForwardRouter
- ForwardText
- ForwardMedia (pic/doc)
- ForwardAV (audio/video/ptt)
- ReplyRouter
- ReplyText
- ReplyMedia (pic/doc)
- ReplyAV (audio/video/ptt)

For each handler found:

- file path
- exported entry (function name)
- how it is invoked (who calls it)
- which config keys it reads (with line refs)

C) CURRENT STAFF REPLY FLOW (PHASE B) - EVIDENCE

- Where ticketId is extracted (quote reply vs !r command)
- Where customer chatId is resolved from ticketId
- Which service function is called to send back to customer
- Which opts are passed (must support manualReply=1, bypassRateLimit=1)

D) MEDIA/DOC CAPABILITY CHECK (NO CHANGES)

- Identify how the "send" service accepts media/doc payloads in this codebase:
 - payload shape for image/document
 - any required fields (mimetype, filename, caption, etc.)
- Give evidence: file path + line refs from existing sender service code.

E) PROPOSE MINIMAL CHANGE LIST (<=5 FILES) FOR PHASE C

- Output ONLY a plan: exact file paths to edit + what each edit will do.
- Must keep architecture locked: Router firewall, no cross-calls between handlers

F) KEYNAME CONTRACT CHECK (MANDATORY)

- Locate keyname.conf.txt exact path.
- For every new/needed config key for Phase C, confirm it exists in keyname.conf.
- If any required key is missing, print:
"MISSING CANONICAL KEY: <key>" + evidence, and STOP (still finish other report

OUTPUT FORMAT (STRICT)**REPORT**

- A) ...
- B) ...
- C) ...
- D) ...
- E) ...
- F) ...

TAK BOLEH COPY/DEPLOY — ini **REPORT sahaja**, tiada "full file body" untuk paste live.

codex

TASK: 6C Fallback Phase C - Implement staff reply MEDIA/DOC (COPY/PASTE OUTPUT, m

SCOPE

- Implement ONLY: "Fallback Phase C: staff reply MEDIA/DOC (quote reply / cmd rep
- MUST follow active pointers:
 - OneData/bots/ONEBOT/config/modules/Core/Fallback.conf
 - > OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf
 - > OneBot/modules/Core/Fallback/FallbackCV.js
 - > OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf :contentReferen
- No changes to foundation: Start.cmd, OneBot/Kernel.js, OneBot/Connector.js, any

HARD RULES (LOCKED)

- NO GUESSING. If you cannot find repo evidence for inbound media detection + dow
- ASCII only (all output files).
- ZERO HARDCODE (no IDs/text/prefix/template paths in JS).
- Canonical keynames ONLY from keyname.conf.txt; if any needed key missing -> "MI
- Output FULL FILE BODY for each file (copy/paste deploy). No summary/testing/com

WHY THIS TASK EXISTS (EVIDENCE)

- ReplyMedia handler is currently NOT FOUND in repo scan. :contentReference[oaici
- Phase B reply text already sends with opts { isAuto:0, manualReply:1, bypassRat
- Send service name in active chain is "send" (SendQueueCV.conf serviceName=send)
- Phase C config keys already exist in canonical keyname list (replyMediaSendPref

FILES TO OUTPUT (MAX 5, EXACT PATHS)

- 1) OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js
- 2) OneBot/modules/Core/Fallback/FallbackCV.js
- 3) OneBot/modules/Core/Fallback/FallbackReplyMediaCV.js (NEW FILE - required be
- 4) OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf

IMPLEMENTATION REQUIREMENTS

A) Router firewall (no cross-calls)

- FallbackReplyRouterCV.js must ONLY parse/validate/dispatch.
- Add a new dependency function: deps.sendReplyMedia(ctx, ticketId, mediaInfo)
- Dispatch rules:
 - If staff message contains MEDIA/DOC (per evidence from repo), route to deps.s
 - Else keep existing text path deps.sendReplyText
 - Keep existing permission + ticketId parse priority (quote preferred then cmd)

B) Media sending (new handler)

- New file FallbackReplyMediaCV.js:
 - Export a single function (e.g. sendToCustomer) or factory; keep it simple.
 - Must:
 - 1) load ticket state same way as Phase B (find ticket by ticketId, get custom
 - 2) obtain media payload from the STAFF message (NOT from quoted text), using
 - detect type (image/document)
 - download/get media object safely with timeout using replyMediaDownloadTi
 - 3) build outbound payload in the exact shape accepted by the existing client.
 - 4) send via meta.getService(<replyMediaSendPrefer or existing send service>)

```
{ isAuto:0, manualReply:1, bypassRateLimit:1 }
```

5) sanitize caption: remove any ticketId match using `cfg.ticketIdRegex` before

- If the staff message is NOT image/document (audio/video/ptt), do NOT implement

C) Wire in `FallbackCV.js`

- Require and wire `FallbackReplyMediaCV.js` into the reply router deps (like `sendR`
- Keep architecture: Router stays firewall, Media handler does send, no shared cr

D) Config (`FallbackCV.conf`)

- Add Phase C keys ONLY if missing; do not rename existing keys.
- Use canonical keys ONLY (confirmed present in `keyname.conf.txt` per report). :co
- Do NOT invent numeric defaults. If Phase C keys are missing, derive defaults ON
- Keep required log toggles (`moduleLog/bugLog/detailLog/traceLog`) intact.

OUTPUT FORMAT (STRICT)

CHANGED FILES

Path: <exact path>

</> Plain text

Path: <exact path>

</> conf

STOP.

TAK BOLEH COPY/DEPLOY — ini **REPORT ONLY** dan **Phase 6C blocked** sebab Codex tak jumpa bukti API download media dari staff inbound message.  codex

TASK: 6C Phase C - Find repo-proven evidence for inbound media download API + sen

SCOPE

- REPORT ONLY. NO CODE/CONF CHANGES.
- Purpose: unblock Phase 6C by proving (with file+line evidence) the exact API to
 - (1) detect staff inbound MEDIA/DOC,
 - (2) download/decrypt/extract media content from the inbound message object,
 - (3) build the payload/options that client.sendMessage accepts for image vs docu

HARD RULES

- NO GUESSING. Evidence must be from files that exist on disk in this project (re
- Output MUST include exact file paths + line numbers + max 2-line excerpts.
- If node_modules or runtime library source is missing on disk, state: "MISSING R

WHAT TO SCAN (MUST)

- 1) Identify WhatsApp client library used by OneBot/Connector.js
 - Find require/import that provides "client" and message object type.
 - Report library name + version from package.json / package-lock / yarn.lock (whi
- 2) Find inbound MEDIA/DOC download/extract API (repo-proven)
 - Search entire project root (not only OneBot folder) for any of:
downloadMedia, downloadAndSaveMediaMessage, decryptFile, MessageMedia, hasMedia
 - If not found in app code, scan installed library source on disk:
 - node_modules/** (only if present)
 - locate Message/Media classes and confirm method names for downloading media f
- 3) Find outbound payload schema (repo-proven)
 - Confirm what payload shapes are accepted by client.sendMessage for:
 - a) image (with caption)
 - b) document (with filename, mimetype, caption if supported)
 - Confirm option keys supported (example candidates only; must prove exact names)
sendMediaAsDocument, filename, mimetype, caption, quotedMessageId, etc.

OUTPUT FORMAT (STRICT)

REPORT

A) CLIENT LIBRARY IDENTIFICATION

- library: <name>
- version: <version>
- evidence:
 - <path>:<line> <2-line excerpt>

B) INBOUND MESSAGE MEDIA/DOC DETECTION

- how to detect: <fields/methods>

 codex
- Masih ada hardcoded default service "send" dalam media path  
(cfg.replyMediaSendPrefer || 'send' + fallback meta.getService('send')).  
 codex

TASK: 6C Phase C - PROPOSAL ONLY for ReplyMedia handler (no file bodies)

SCOPE

- REPORT/PROPOSAL ONLY. DO NOT OUTPUT ANY CHANGED FILE BODIES.
- Goal: propose the exact minimal file list (<=5 files) to complete tracker item: "6C) FALLBACK Phase C: staff reply MEDIA/DOC - Add ReplyMedia handler (quote re

HARD RULES

- NO GUESSING. Must scan full repo and follow active pointers:  
Core/Fallback.conf -> Core/FallbackHub.conf -> modules/Core/Fallback/FallbackCV
- Because this requires a NEW handler file, output PROPOSAL ONLY and STOP (no file)
- ASCII only.
- ZERO HARDCODE:
  - No hardcoded IDs/text/prefix/command words/template paths in JS.
  - No hardcoded service default like "send" in JS. Service names must come from
- Canonical keynames only from keyname.conf.txt. If any needed key missing, report

#### WHAT TO OUTPUT

##### A) CONFIRM CURRENT STATE (EVIDENCE)

- Confirm ReplyMedia handler does not exist today (path search results).
- Confirm how router currently dispatches media (file+line refs).
- Confirm proven media API: staffMsg.hasMedia + staffMsg.downloadMedia() returns

##### B) PROPOSE NEW FILE (REQUIRES OWNER APPROVAL)

- Propose EXACT new handler file path + extension based on repo conventions:
  - Find whether this repo intentionally uses .txt modules and where that is registered
  - Choose ONE correct format for the new handler (CV.js or CV.txt) consistent with
- Proposed handler responsibilities:
  - Only pic/doc reply send (image/document)
  - sanitize caption (strip ticketIdRegex)
  - send opts { isAuto:0, manualReply:1, bypassRateLimit:1 }
  - choose send service from cfg.replyMediaSendPrefer ONLY (no JS default), else

##### C) PROPOSE EXACT FILE LIST (<=5) TO CHANGE

- List each file path and a 1-line purpose for the change.
- Must include moving the current sendMediaToCustomer logic OUT of ReplyText and
- Keep router firewall: router parses/dispatches only.

##### D) READY-TO-IMPLEMENT VERDICT

- If loader/extension choice is proven and all required keys exist: "READY FOR IMPLEMENTATION"
- Else: "BLOCKED" + exact missing proof or missing canonical key.

#### OUTPUT FORMAT (STRICT)

##### PROPOSAL

- 2) OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js
- 3) OneBot/modules/Core/Fallback/FallbackCV.js
- 4) OneBot/modules/Core/Fallback/FallbackReplyTextCV.txt
- 5) OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf

#### IMPLEMENTATION REQUIREMENTS

- A) New ReplyMedia handler (FallbackReplyMediaCV.js)
- Responsibilities: ONLY image/document reply send to customer.
  - Inputs: (meta, cfg, ticketStore, ticketId, staffMsg, opts)
  - Steps:
    - 1) Validate staffMsg.hasMedia and type is image or document (use msg.type or ms
    - 2) Download with timeout using cfg.replyMediaDownloadTimeoutMs:
      - await staffMsg.downloadMedia()

- if no media -> return { ok:0, code:'media\_download\_failed' }
- 3) Sanitize caption:
  - captionRaw from staffMsg.caption OR '' (evidence-based fields in whatsapp-
  - remove ticketId using cfg.ticketIdRegex (same logic as Phase B stripping)
- 4) Build outbound options:
  - start from opts (must include { isAuto:0, manualReply:1, bypassRateLimit:1
  - set caption to sanitized caption if non-empty
  - if type is document -> set sendMediaAsDocument=1 (true)
- 5) Resolve customerChatId using same ticket lookup logic as Phase B (do NOT dup
  - Find ticket by ticketId in ticketStore state
  - Read ticket.customerChatId
- 6) Choose send service WITHOUT JS literal default:
  - Use cfg.replyMediaSendPrefer (must be non-empty; do not fallback to 'send'
  - If missing/blank or meta.getService(...) returns null -> return { ok:0, co
- 7) Send:
  - await send(customerChatId, mediaObj, outOpts)
  - return { ok:1 }

#### B) Router firewall

- FallbackReplyRouterCV.js must remain parse/validate/dispatch only.
- For media/doc branch, call deps.sendReplyMedia(ctx, ticketId, staffMsg, opts) (

#### C) Move media logic out of ReplyText

- In FallbackReplyTextCV.txt:
  - Remove existing embedded media send code OR refactor it to call ReplyMedia ha
  - Keep sendToCustomer strictly text-only.

#### D) Wiring in FallbackCV.js

- Require the new FallbackReplyMediaCV.js and wire deps.sendReplyMedia into reply
- Ensure opts for customer send includes: { isAuto:0, manualReply:1, bypassRateLi

#### E) Config updates (FallbackCV.conf)

- Ensure Phase C keys exist and are canonical (add only if missing; do not rename
- Keep moduleLog/bugLog/detailLog/traceLog keys present.

BOLEH COPY/DEPLOY (untuk file

OneBot/modules/Core/Fallback/FallbackReplyTextCV.js ) — dah buang hardcoded send  
dan sekarang resolve service dari globalConf.sendPrefer +  
meta.getService(serviceName) .  codex  codex

TASK: 6C Phase C - Finalize ReplyMedia handler (copy/paste deploy, max 5 files)

#### SCOPE

- Implement ONLY: staff reply MEDIA/DOC (image/document) from ops group -> custom
- Must sanitize/remove ticketId from caption before sending to customer.
- Must bypass RateLimit: { isAuto:0, manualReply:1, bypassRateLimit:1 }.
- No changes to foundation: Start.cmd, OneBot/Kernel.js, OneBot/Connector.js, any
- ASCII-only. ZERO HARDCODE. Canonical keynames only (keyname.conf.txt).
- NO GUESSING: if any proof missing, output REPORT ONLY + STOP.

PRECHECK (MUST, REPORT WITH PATH+LINE EVIDENCE)

- 1) Confirm active pointer chain:  
Core/Fallback.conf -> Core/FallbackHub.conf -> OneBot/modules/Core/Fallback/Fa
- 2) Confirm whatsapp-web.js primitives exist on disk (node\_modules evidence):  
msg.hasMedia + await msg.downloadMedia() and payload usable in client.sendMess

FILES TO OUTPUT (MAX 5, EXACT PATHS)

- 1) OneBot/modules/Core/Fallback/FallbackReplyMediaCV.js (NEW FILE allowed)
- 2) OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js
- 3) OneBot/modules/Core/Fallback/FallbackCV.js
- 4) OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf
- 5) (ONLY if needed) OneBot/modules/Core/Fallback/FallbackReplyTextCV.js

#### IMPLEMENTATION RULES

##### A) Router firewall

- Router parses/dispatches only.
- If ctx.message.hasMedia and kind is image/document -> deps.sendReplyMedia({tick
- Else -> deps.sendReplyText({ticketId, body, source})

##### B) ReplyMedia handler (new file)

- Export: sendToCustomer(input)
- Steps:
  - 1) Parse ticketId using cfg.ticketIdRegex (same approach as ReplyText).
  - 2) Load ticket from store, get customerChatId, respect cfg.ticketStatusClosed.
  - 3) Download media with timeout using cfg.replyMediaDownloadTimeoutMs (repo-prov
  - 4) Caption source must be evidence-based (use staffMsg.caption or staffMsg.body

- 5) Strip ticketId from caption using `cfg.ticketIdRegex` before sending.
- 6) Resolve send service WITHOUT JS literal defaults:
  - First try `cfg.replyMediaSendPrefer` (CSV list) if present.
  - If blank, fall back to `GlobalCV.conf` `sendPrefer` first entry via `meta.loadC`
  - If still blank or service missing -> return `{ok:0, code:'send_missing'}`.
- 7) Send via resolved service: `await send(customerChatId, mediaObj, outOptions)`
  - `outOptions` includes: `{ isAuto:0, manualReply:1, bypassRateLimit:1 }`
  - if `kind=document` set `sendMediaAsDocument=1`
  - set caption only if non-empty after stripping `ticketId`

#### C) No new staff text keys

- Do NOT add new reply templates.
- Router only sends existing staff replies for:
  - `need_ticket`, `need_text` (text flow only), `ticket_not_found`, `ticket_closed`, `sent`
- For media errors like `media_download_failed` / `send_missing` / `send_error`:
  - return code, but if no existing matching reply template key exists, DO NOT se

#### D) Config

- Ensure Phase C canonical keys exist (add only if missing):
  - `replyMediaSendPrefer`
  - `replyMediaMaxTries`
  - `replyMediaRetryBaseMs`
  - `replyMediaRetryJitterMs`
  - `replyMediaGapMs`
  - `replyMediaDownloadTimeoutMs`
- If any needed key missing from `keyname.conf.txt` -> output:
  - MISSING CANONICAL KEY: `<key>` + evidence, then STOP (no file bodies).

#### OUTPUT FORMAT (STRICT)

TAK BOLEH COPY/DEPLOY (lagi). Sebab FallbackCV.js masih hardcode service name send (meta.getService('send')) dan guna terus untuk hantar DM/ops reply/burst flush.

 codex  codex  codex  codex

PROMPT ARAHAN UNTUK CODEX (fix balik 1 fail sahaja):

TASK: Remove hardcoded send service in FallbackCV.js (copy/paste deploy, 1 file o

SCOPE

- Fix ONLY: OneBot/modules/Core/Fallback/FallbackCV.js
- Remove ALL hardcoded meta.getService('send') usage.
- No other refactor. No other file changes.
- ASCII only. ZERO HARDCODE. No new keys. No Hub/Foundation edits.

REQUIREMENTS

- Resolve send service name from config/global only:
 - 1) Load global conf using cfg.globalConfRel via meta.loadConfRel(cfg.globalConf
 - 2) Normalize shape: if loaded.conf exists use that, else use loaded directly.
 - 3) Read globalConf.sendPrefer (CSV), pick FIRST non-empty entry as serviceName.
 - 4) const send = meta.getService(serviceName) (NO literal defaults like 'send').
 - 5) If serviceName blank OR send not a function -> disable module with bugLog me
- Replace every usage of the old "send" variable in:
 - scheduleBurstFlush() sends to group
 - onDmMessage() inboundAckTemplate reply
 - sendStaffReply() staff reply fallback
 Keep the same opts behavior (manualReply flags remain where already used).

- 4) OneBot/modules/Core/Fallback/FallbackReplyTextCV.js
- 5) OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf

#### MUST DO FIRST (EVIDENCE)

- Confirm active pointers:
  - OneData/bots/ONEBOT/config/modules/Core/Fallback.conf
  - > OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf
  - > OneBot/modules/Core/Fallback/FallbackCV.js
  - > OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf
- Confirm whatsapp-web.js media API exists on disk (node\_modules evidence):

```
staffMsg.hasMedia + await staffMsg.downloadMedia() -> MessageMedia
and send pipeline passes non-string payload to client.sendMessage.
```

#### IMPLEMENTATION RULES

##### A) Router firewall

- FallbackReplyRouterCV.js: parse/validate/dispatch ONLY.
- If staffMsg.hasMedia and kind is image/document -> deps.sendReplyMedia(...)
- Else -> deps.sendReplyText(...)

##### B) New ReplyMedia handler (FallbackReplyMediaCV.js)

- Export: sendToCustomer({ cfg, meta, store, ticketStoreKey, ticketId, staffMsg,
- Ticket resolution: reuse same ticket lookup rules as ReplyText (ticketId -> tic
- Download with timeout cfg.replyMediaDownloadTimeoutMs (no guessed helpers; use
- Caption:
  - Read from staffMsg.caption or staffMsg.body ONLY if proven by repo/node\_modul
  - Strip ticketId using cfg.ticketIdRegex before sending.
- Service resolve WITHOUT literal defaults:
  - Try cfg.replyMediaSendPrefer (CSV) first non-empty
  - Else load globalConf via cfg.globalConfRel and use globalConf.sendPrefer firs
  - If still blank or meta.getService(serviceName) not a function -> return { ok:
- Send:
  - await send(customerChatId, mediaObj, outOpts)
  - outOpts merges options and adds caption if non-empty
  - if document -> set sendMediaAsDocument=1 (only if proven supported)
  - always include { isAuto:0, manualReply:1, bypassRateLimit:1 }

##### C) ReplyText stays text-only

- FallbackReplyTextCV.js must NOT contain any media/doc logic.
- No hardcoded 'send' inside ReplyText (service must resolve via globalConf.sendP

##### D) Config (FallbackCV.conf)

- Must contain required canonical keys already used by FallbackCV.js + Phase C ke
- replyMediaSendPrefer, replyMediaMaxTries, replyMediaRetryBaseMs, replyMediaRetr
- Do NOT invent numeric defaults. If any required key is missing in existing conf

Thought for 1m 47s >

TAK BOLEH COPY/DEPLOY. codex

Sebab ringkas:

- Codex bagi **Summary sahaja** (tiada **FULL file body** untuk copy/paste live).
- Codex sendiri tulis **node_modules/whatsapp-web.js** tak ada dalam environment dia (jadi bukti API media/caption masih tak solid).
- Dia sentuh **11 files** (langgar batch max 4–5 / scope 6C).

PROMPT ARAHAN UNTUK CODEX (buat ikut turutan)

1) Minta bukti media API dulu (REPORT ONLY)

TASK: 6C Media API proof (REPORT ONLY, no changes)

SCOPE

- REPORT ONLY. NO CODE/CONF CHANGES.
- Need repo-proven evidence (file path + line no + max 2-line excerpt) for:
 - 1) staffMsg.hasMedia
 - 2) await staffMsg.downloadMedia()
 - 3) where caption lives (caption vs body vs _data.*)
 - 4) how to send document vs image (sendMediaAsDocument option key if exists)

MUST

- Identify WhatsApp library used and version (package.json / lock file).
- If node_modules exists in THIS repo environment, cite the exact implementation
- If node_modules is missing, output:
"BLOCKED: node_modules missing for whatsapp-web.js proof" and STOP.

OUTPUT

REPORT

- A) library + version + evidence
- B) inbound media detect + evidence

- C) downloadMedia + return shape + evidence
- D) caption field + evidence
- E) send payload/options for image/doc + evidence

⟨⟩ Plain text

2) Lepas UNBLOCKED, baru minta deploy pack (max 5 files, full body)

TASK: 6C DEPLOY PACK (copy/paste live, max 5 files, no extras)

SCOPE

- Implement ONLY 6C: staff reply MEDIA/DOC -> customer, sanitize ticketId from ca
- ASCII-only, ZERO HARDCODE, canonical keynames only.
- DO NOT touch BootAnnounce/OutboundGateway or any other module.

FILES TO OUTPUT (EXACT, MAX 5)

- 1) OneBot/modules/Core/Fallback/FallbackReplyMediaCV.js (NEW FILE)
- 2) OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js
- 3) OneBot/modules/Core/Fallback/FallbackCV.js
- 4) OneBot/modules/Core/Fallback/FallbackReplyTextCV.js
- 5) OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf

HARD RULES

- No Summary/Testing/commit/PR text.
- Output FULL BODY for each file only (copy/paste ready).
- If your previous attempt modified any other files, revert them internally and D

- 4) OneBot/modules/Core/Fallback/FallbackReplyTextCV.js (ONLY if you must rem
- 5) OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf (ONLY if keys mis

#### HARD RULES

- Do NOT depend on whatsapp-web.js-specific option keys (e.g. sendMediaAsDocument
- Do NOT read staffMsg.caption directly unless proven in repo code.
- Caption source must be taken from existing ctx fields already used in repo: ctx.text OR ctx.message.body OR ctx.message.caption OR ctx.raw.\_data.body OR ct (use whichever exists, then strip ticketIdRegex).
- Media download MUST be guarded:
  - Require staffMsg && staffMsg.hasMedia === true
  - Require typeof staffMsg.downloadMedia === 'function'
  - Otherwise return { ok:0, code:'media\_download\_failed' } (no new staff text).
- Send service resolution MUST NOT hardcode "send":
  - Try cfg.replyMediaSendPrefer (CSV) first non-empty
  - Else load globalConf using cfg.globalConfRel and use globalConf.sendPrefer fi

- If missing/service not found -> return { ok:0, code:'send\_missing' }

#### IMPLEMENTATION NOTES (STRICT)

##### A) Router firewall

- Router parses/dispatches only.
- If ctx.message.hasMedia and msg.type/msg.\_data.type indicates image|document -> ticketId, staffMsg=ctx.message, captionText=messageTextFromCtx(ctx), source
- Else -> existing deps.sendReplyText.

##### B) ReplyMedia handler (FallbackReplyMediaCV.js)

- sendToCustomer({ cfg, meta, store, ticketStoreKey, ticketId, staffMsg, captionT
- Strip ticketId from captionText using cfg.ticketIdRegex.
- Download media with timeout cfg.replyMediaDownloadTimeoutMs (simple Promise.rac
- Send via resolved service with outOptions merged:  
{ isAuto:0, manualReply:1, bypassRateLimit:1 } + caption (if non-empty).
- Do NOT set sendMediaAsDocument unless proven elsewhere in repo.

##### C) ReplyText stays text-only

- Ensure ReplyText module has no embedded media/doc send path.

##### D) Config

- Add Phase C keys ONLY if missing and ONLY canonical:  
replyMediaSendPrefer, replyMediaMaxTries, replyMediaRetryBaseMs, replyMediaRetr
- Do NOT invent numeric defaults. If missing, leave blank/0 and keep behavior saf

codex.txt

Document

check dulu dan kalau tak boleh buat 5 sekaligus buat 2-3 file sebab banyak kali dah ulang file sama ni, nanti dok berulang script kita buat, tadi fallbackcv dah ok ni kenapa minta balik

Thought for 6m 28s >

### 6C (Phase C) — BOLEH COPY/DEPLOY.

Dalam set ni, FallbackCV.js dah resolve send service ikut globalConf.sendPrefer (bukan hardcoded "send" ).  codex

FallbackReplyTextCV.js pun dah ikut globalConf.sendPrefer (bukan hardcoded).

 codex

FallbackReplyMediaCV.js guard hasMedia + downloadMedia() dan kalau tak ada, return code tanpa crash.  codex

Tentang "kenapa minta balik FallbackCV.js": sebelum ni kita asyik ulang sebab wiring berubah + ada versi lama yang masih hardcoded. Sekarang versi yang kau paste ni dah settle (guna sendPrefer).  codex

Kalau kau nak elak ulang file sama, untuk deploy 6C cukup batch 3 fail sahaja (anggap FallbackCV.js & FallbackReplyTextCV.js dah kau paste live ikut versi atas):

1. OneBot/modules/Core/Fallback/FallbackReplyMediaCV.js
2. OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js
3. OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf

## PROMPT NEXT SEQUENCE (6D) — buat 3 fail sahaja (tak ulang banyak)

TASK: 6D Implement ReplyAV (audio/video/ptt) - copy/paste deploy, MAX 3 FILES

### SCOPE

- Implement ONLY 6D: staff reply AUDIO/VIDEO/PTT -> send to customer (quote reply)
- Must bypass RateLimit: { isAuto:0, manualReply:1, bypassRateLimit:1 }.
- Must strip ticketId from caption/text using cfg.ticketIdRegex.
- ASCII-only, ZERO HARDCODE, no Hub/Foundation edits.
- NO GUESSING: do NOT use whatsapp-web.js option keys unless you can prove they a

### FILES TO OUTPUT (EXACT, MAX 3)

- 1) OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js
- 2) OneBot/modules/Core/Fallback/FallbackReplyAVCV.js (NEW FILE)
- 3) OneBot/modules/Core/Fallback/FallbackCV.js

### IMPLEMENTATION RULES

#### A) Router

- Detect AV kinds using ctx.message.type OR ctx.message.\_data.type: audio, video, ptt (and any repo-proven aliases).
- If AV -> deps.sendReplyAV({ ticketId, staffMsg: ctx.message, captionText: messa
- Keep existing text + image/document flow unchanged.

#### B) New handler FallbackReplyAVCV.js

- Similar pattern to ReplyMedia:
  - validate staffMsg + hasMedia truthy + downloadMedia function
  - download with timeout using cfg.replyMediaDownloadTimeoutMs (reuse same key;
  - resolve send service from cfg.replyMediaSendPrefer first, else globalConf.send
  - send(customerChatId, mediaObj, outOptions) with bypass flags
  - strip ticketId from captionText before setting outOptions.caption

#### C) Audio/video special toggles (NO GUESSING)

- `cfg.replyAudioAsVoice` and `cfg.replyVideoAsDocument` exist; only apply if you find
- If not found, ignore toggles (still send media normally).

ok next

Thought for 51s >

**NEXT = 6E (Routing/BIND + wrong-group tips).**  ONEBOTREBUILDWORKFLOWTRACKER

TASK: 6E DISCOVERY REPORT ONLY (Tag -> WorkgroupKey bind + wrong-group tips)

## SCOPE

- REPORT ONLY. NO CODE/CONF CHANGES.
- Goal: get exact file map + minimal change plan (2-3 files) for 6E:
  - Bind rule storage (tag -> workgroupKey)
  - Ticket move across departments using WorkGroups.resolve()
  - Tip replies when command used in wrong group (short, consistent)

## HARD RULES

- NO GUESSING. Scan full repo and follow ACTIVE pointers.
- Max 5 files in any later patch, but this task is REPORT ONLY.
- Canonical keynames ONLY from keyname.conf.txt; if any required key missing -> p

MUST CHECK (EVIDENCE REQUIRED: path + line number + max 2-line excerpt)

## 1) Active pointer chains:

- WorkGroups.conf -> WorkGroupsHub.conf -> WorkGroupsCV.js -> WorkGroupsCV.conf
- Fallback.conf -> FallbackHub.conf -> FallbackCV.js -> FallbackCV.conf

## 2) Where ticket "tag" is stored today (if exists):

- ticket object fields in store (ticketStoreKey state)
- any existing command / flow that sets/changes tag

## 3) WorkGroups API:

- WorkGroups.resolve() signature + return fields (workgroupKey, groupChatId, etc)
- How other modules call WorkGroups service today

## 4) Wrong-group detection:

- Identify which module currently checks "command used in wrong group"
- Identify existing config keys / templates for short tips (no new hardcoded text)

## 5) Bind rule storage candidate:

- Confirm JsonStore usage pattern for storing a mapping (tag -> workgroupKey)
- Identify existing store keys used for similar mappings (if any)

## OUTPUT FORMAT

## REPORT

## A) ACTIVE POINTERS

- WorkGroups: <CoreConf> -> <HubConf> -> <ImplJs> -> <ImplConf>
- Fallback: <CoreConf> -> <HubConf> -> <ImplJs> -> <ImplConf>

## B) CURRENT DATA MODEL

- Ticket fields: (list fields + evidence)
- Tag support: (found / not found)

## C) WORKGROUPS API

- resolve(): signature + evidence

- existing calls: list call sites

#### D) WRONG-GROUP TIPS

- existing logic + evidence
- existing config/template keys + evidence

#### E) MINIMAL PATCH PLAN (2-3 FILES)

- list exact file paths + 1-line change per file

keyname.conf.txt ni tak ada apa2 fungsi cuma senarai nama keyname yang di persetujui saja untuk rujukan untuk guna dalam script / config, kenapa kau mina dia TASK: Output deployable keyname.conf.txt (append-only tag + groupKey)?

Thought for 14s >

Sebab rule **"canonical keynames only"** yang kau set tu bukan sekadar "rujukan"—dia jadi **kontrak**: bila kita nak buat feature 6E (bind tag → groupKey / workgroupKey), script/conf **WAJIB** guna key yang wujud dalam keyname.conf.txt .

Jadi bila Codex report " tag / groupKey / workgroupKey tak ada dalam keyname list", kita **tak boleh teruskan 6E** tanpa langgar rule (nanti jadi duplicate/alias key atau "invent key").

Kenapa aku minta "deployable full file body"? Sebab cara kerja kita **copy/paste live** dan rule kau pun **tak nak patch snippet**—jadi untuk update file reference tu pun, kita kena

paste **satu fail penuh** (append-only) supaya list canonical tu betul-betul wujud dekat live/repo.

Kalau kau nak settle cepat: **buat 1 task sahaja** untuk Codex — “append-only add 3 key (tag, groupKey, workgroupKey) dan output full file body `keyname.conf.txt` dari disk”. Setelah tu barulah 6E boleh jalan tanpa ulang-ulang blocker yang sama.

    ... Compare with Claude ▾

**codex.txt**  
Document

aku masih tak paham kenapa berkali kali kau minta codex tulis `keyname.conf.txt`, sebab yang ni readme untuk `keyname`

Thought for 1m 20s >

Sebab tracker/workflow yang kau bagi sendiri treat `keyname.conf.txt` sebagai “**single source of truth**” untuk nama key — kalau key tak wujud dalam list tu, Codex wajib STOP (tak boleh main cipta key baru / alias).  ONEBOTREBUILDWORKFLOWTRACKER

Yang jadi **berulang-ulang** tu sebab Codex **tak pernah output betul-betul** `keyname.conf.txt` dari disk untuk kau paste. Dia asyik keluarkan audit “from pasted **.conf only**” (dia sendiri tulis list tu based on `.conf` yang dipaste dalam chat), lepas tu dia “tampil” tag / groupKey / workgroupKey kat hujung report — itu **bukan file keyname sebenar** untuk deploy.  codex  codex

Kalau kau memang anggap `keyname.conf.txt` cuma **readme/rujukan** dan tak nak dia jadi **blocker**, kena update rule tracker tu (kalau tak, Codex akan terus ulang benda sama).

 ONEBOTREBUILDWORKFLOWTRACKER

Sources

    ... Compare with Claude ▾

**keyname.conf.txt**

nah aku bagi kau original file dan kau baca senang dari sini

Thought for 1m 48s >

Aku dah baca file yang kau bagi tu. **Memang betul: itu "readme/audit", bukan fail canonical key list yang enforce build.** Dalam header dia sendiri tulis **"CONF KEYS AUDIT (from pasted .conf only)"** dan **"based only on the .conf contents provided in chat"**.

 keyname.conf

**Kenapa jadi berulang-ulang minta Codex "tuliskan keyname.conf.txt"?**

Sebab prompt sebelum ni treat `keyname.conf.txt` macam **single source canonical** (kalau key tak ada = STOP). Tapi file yang kau bagi ni **bukan fail canonical**, dia cuma audit list 110 keys yang ditemui masa tu (contoh list tu berhenti sampai `workGroupId` dan memang tak ada `tag/groupKey/workgroupKey`).  `keyname.conf`

✅ **Fix workflow (supaya tak ulang lagi):**

Mulai sekarang, **jangan jadikan `keyname.conf.txt` sebagai blocker.** Anggap dia **doc sahaja**. Bila nak tambah key baru untuk feature baru, Codex cuma perlu **scan semua conf sedia ada untuk elak duplicate/alias**, bukan "wajib ada dalam `keyname.conf.txt`".

Kalau kau setuju, aku akan guna rule tu untuk semua prompt next stage dan **tak minta Codex rewrite `keyname.conf.txt` lagi** kecuali kau sendiri suruh update doc.

Sources

    ... Compare with Claude ▾

keyname tu sumber rujukan maksudnya tak boleh reka keyname sendiri, sebab nak elak fungsi sama tapi nama key berlainan tu je

Thought for 20s >

Faham. `keyname.conf.txt` = **sumber rujukan untuk elak "fungsi sama tapi nama key berlainan"** — jadi kita memang tak boleh reka keyname sesuka hati.

Mulai sekarang aku akan pakai cara ni (supaya tak ulang benda sama lagi):

1. Sebelum guna/ tambah key dalam script atau .conf, Codex **WAJIB** cari dulu dalam keyname.conf.txt sama ada konsep tu dah ada key canonical.
2. Kalau tak jumpa key untuk konsep tu, Codex **TAK BOLEH** terus guna key baru dalam code/conf. Dia kena buat **REPORT** sahaja:
  - "NEED NEW CANONICAL KEY for <concept>"
  - cadang 1 nama key sahaja (ASCII, jelas)
  - tunjuk 2-3 tempat yang akan guna key tu bila kau approve
3. Lepas kau approve barulah kita **tambah key itu sekali sahaja** dan guna konsisten (tak ada alias/duplicate).

Kalau kau nak, ini 1 **prompt standard** (single prompt, bukan 2 task) untuk Codex ikut setiap kali ada feature baru:

TASK: Keyname compliance gate (REPORT ONLY)

#### SCOPE

- REPORT ONLY. NO CODE/CONF CHANGES.
- Before implementing any new feature, check keyname.conf.txt to ensure:
  - No duplicate/alias keys for same concept.
  - Use existing canonical keys when available.

#### RULES

- Do NOT invent new keys in code/conf.
- If a concept has no canonical key in keyname.conf.txt:
  - Output: NEED NEW CANONICAL KEY: <concept>
  - Propose exactly ONE key name (ASCII)
  - List where it would be used (file paths only)
  - STOP.

#### OUTPUT

##### REPORT

- keyname.conf.txt path used
- matched canonical keys (concept -> key)

</> Plain text

Kalau kau bagi aku konsep 6E yang tepat (contoh: "tag bind to workgroup"), aku akan pastikan prompt seterusnya ikut gate ni dan **tak akan minta Codex tulis semula keyname.conf.txt berulang** kecuali kau sendiri nak update doc tu.

keyname dah ada dalam master header aku buat kerja kau ikut macam biasa tadi je, tak payah tambah output bagai melainkan kau tengok codex buat salah baru kau tegur

Thought for a couple of seconds

Baik. Mulai sekarang aku ikut **master header** kau saja:

- **Tak tambah output/step pasal keyname** dalam prompt.
- Aku cuma **check senyap-senyap** (bila review codex.txt).
- Kalau Codex **terpakai key baru / alias / duplicate** barulah aku tegur ringkas macam tadi: **"BOLEH/TAK BOLEH DEPLOY + path mana boleh copy"** dan sebab 1 baris.

Teruskan hantar codex.txt / next output bila ready.

    ... Compare with Claude 

ok sekarang kita dah sampai mana? apa next sequence buat prompt terus

Thought for 1m 19s >

Sekarang dah sampai **6D (ReplyAV + inbound media/album forward)** siap, next sequence ikut tracker ialah **6E (ROUTING/BIND + WRONG-GROUP TIPS)**.

 ONEBOTREBUILDWORKFLOWTRACKER

**TASK: 6E Implement ROUTING/BIND (tag -> workgroupKey) + WRONG-GROUP TIPS**

**TAK BOLEH COPY/DEPLOY (5:15PM)** — Codex bagi **REPORT ONLY** dan 6F **blocked** sebab key command `cmdQuick1/cmdQuick2/cmdQuick3/cmdTeach` **tak ada dalam keyname reference.**  codex

TASK: 6F UNBLOCK - Reuse existing canonical command keys (REPORT ONLY, no changes

#### SCOPE

- REPORT ONLY. NO CODE/CONF CHANGES.
- Do NOT edit keyname.conf.txt.
- Do NOT invent new keynames.
- Goal: find existing canonical command keys already used in current FallbackCV.c
  - Quick send slot 1/2/3
  - Teach template slot 1/2/3

#### MUST

- 1) Locate and open the ACTIVE Fallback config and code pointers:  
Core/Fallback.conf -> Core/FallbackHub.conf -> FallbackCV.js -> FallbackCV.conf
- 2) In ACTIVE FallbackCV.conf, list ALL existing command keys/values that look like
  - keys starting with "cmd" or containing "cmd"
  - values that start with "!" or "/" or any command prefix used in this repo
 Provide: key + value + line number
- 3) Search existing fallback code for command parsing usage and which cfg keys it  
Provide: file path + line number
- 4) Produce a mapping proposal using ONLY existing canonical keys:
  - quick1 -> <existingKey>
  - quick2 -> <existingKey>
  - quick3 -> <existingKey>
  - teach -> <existingKey>
- 5) If you cannot find suitable existing canonical keys for 6F:  
Output ONLY:  
BLOCKED: No existing canonical command keys for 6F
  - keyname file path used
  - list missing concepts: quick1, quick2, quick3, teach
 STOP.

#### OUTPUT

##### REPORT

- A) Active pointers
- B) Existing command keys in FallbackCV.conf (key/value/line)

C) Command parsing callsites + cfg keys referenced (path/line)  
D) Proposed key reuse mapping (or BLOCKED)

**TAK BOLEH COPY/DEPLOY (Create Time 6:15PM)** — itu **REPORT** sahaja (tiada full file body).  codex

Report juga tunjuk dalam FallbackCV.conf cuma ada cmdReply=!r sahaja, jadi 6F  
"!1/!2/!3/teach" memang belum boleh jalan ikut cara Codex cadang.  codex  codex

TASK: 6F-A Implement Quick Reply + Teach using EXISTING cmdReply prefix ONLY (DEP

#### SCOPE

- Implement 6F-A ONLY:
  - Staff quick send slot 1/2/3 to customer
  - Staff teach template slot 1/2/3 into JsonStore
- MUST NOT add new command config keys (reuse existing cfg.cmdReply only).
- MUST NOT edit keyname.conf.txt / keyname audit.
- ASCII-only. ZERO HARDCODE (no IDs/text/templates/prefix words hardcoded).
- Output FULL FILE BODY only. No Summary/Testing/commit/PR.

#### FILES TO OUTPUT (MAX 2, EXACT PATHS)

- 1) OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js
- 2) OneBot/modules/Core/Fallback/FallbackCV.js

#### RULES

- Derive quick prefix from cfg.cmdReply (example cmdReply="!r" => prefix="!"). DO
- Quick send command tokens:
  - prefix+"1", prefix+"2", prefix+"3"
- Teach command tokens (no new keyword):
  - prefix+"1=<text>", prefix+"2=<text>", prefix+"3=<text>"
- Ticket target:
  - For quick send: require ticketId from quote parse OR allow explicit ticketId

- Store:
  - Save templates under the existing ticket store (same store used for tickets)
  - No new store paths, no hardcoded file paths.

#### IMPLEMENTATION

##### A) FallbackReplyRouterCV.js

- Add `parseQuick(ctx, cfg)` using `messageTextFromCtx(ctx)`.
- Detect quick token (prefix+digit) and teach token (prefix+digit=...).
- Dispatch via deps:
  - `deps.onQuickTeach({ slot, text, ctx })`
  - `deps.onQuickSend({ slot, ticketId, ctx, source })`

##### B) FallbackCV.js

- Wire new deps:
  - `onQuickTeach`: writes template text to store (`quickReplies[slot]`)
  - `onQuickSend`: reads template text, then calls existing `sendReplyText` flow with
- Use existing staff reply keys if available; otherwise stay silent (do NOT inven

BOLEH DEPLOY (Create Time 6:46PM): codex

- OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf codex
- OneBot/modules/Core/Fallback/FallbackTicketCardCV.js codex
- OneBot/modules/Core/Fallback/FallbackCV.js codex

TASK: 6G DISCOVERY REPORT ONLY (Anti-miss safeguards)

SCOPE

- REPORT ONLY. NO CODE/CONF CHANGES.
- Find the minimal, correct place to implement 6G:
 - reminders for unreplied open DM tickets
 - escalation to admin/controller role in ops group (no spam)
- Follow active pointers. Do not guess.

REQUIREMENTS

- Resolve active pointer chains:
 - Fallback.conf -> FallbackHub.conf -> FallbackCV.js -> FallbackCV.conf
 - Scheduler.conf -> SchedulerHub.conf -> SchedulerCV.js -> SchedulerCV.conf
 - AccessRoles (to identify admin/controller role checks)
- From existing code/config, prove:
 - 1) Where "ticket last activity" is stored (fields + lines).
 - 2) How to decide "unreplied" (any existing fields like lastReplyAt / lastReplied)
 - 3) How to send to ops group for a ticket (groupKey -> groupChatId resolution path)
 - 4) Best scheduling mechanism already used (SchedulerCV service vs timer in module)
- List existing canonical config keys already present that can control:
 - enable, remindAfter, remindEvery, escalateAfter, maxPerRun, quietHours (if any)

- If any required concept has no canonical key, output:
"NEED NEW CANONICAL KEY: <concept>" and STOP.

OUTPUT

REPORT

- A) Active pointers (exact paths)
- B) Ticket fields (evidence)
- C) Scheduler capability (evidence)
- D) Reminder + escalation design using existing keys (no new keys)

</> Plain text

... Compare with Claude ▾

sebelum saya prompt terbaru ni nak tanya kenapa kita dok main tukar dan ulang script sama je ni?

Sebab utama kita nampak "ulang/tukar script sama" ialah:

- Sequence memang sambung atas file yang sama.** Banyak task (6C→6D→6E→6F) semuanya masuk dalam pipeline Fallback yang sama, jadi fail yang selalu disentuh memang `FallbackCV.js` / `FallbackReplyRouterCV.js` / `FallbackCV.conf`.
- Codex kadang keluarkan REPORT/PROPOSAL atau versi lama campur sekali.** Bila output bukan "full body" atau ada hardcode/format salah, kita terpaksa minta semula sampai dapat 1 set yang betul-betul deployable.
- Constraint "max 2–3 file" vs "feature perlukan wiring+conf+handler".** Kalau feature perlukan 3 tempat sekaligus (router + core + conf/template), tapi Codex keluarkan separuh, kita akan nampak macam ulang.

Untuk elak ulang lepas ni, kita boleh pegang rule praktikal:

- Kalau task perlukan wiring, allow sekali keluarkan 3–5 file dalam satu set, dan lepas deploy lock set tu (jangan touch balik kecuali ada bug).
- Aku akan terus buat macam kau suka: ringkas "BOLEH/TAK BOLEH + path" sahaja bila semak `codex.txt`.

... Compare with Claude ▾

↳ Untuk elak ulang lepas ni, kita boleh pegang rule praktikal:

ok boleh

Baik. Rule praktikal kita pakai mulai sekarang:

- Aku semak codex.txt → jawab ringkas je: **BOLEH/TAK BOLEH deploy + path**.
- Bila satu set dah **BOLEH deploy & kau dah paste live**, kita **LOCK** set tu (tak sentuh balik) kecuali ada bug baru yang confirm.
- Untuk task yang memang perlukan wiring, kita allow **sekali** buat **3–5 file** dalam satu set, lepas tu terus lock.

Next prompt yang terakhir kau ada (6G discovery) boleh jalan bila kau ready.

baca ni dulu boleh copy atau tak tapi jangan buat prompt dulu, hanya bagi tahu boleh copy atau tak saja dulu sebab saya nak suruh awak baca readmebuild keseluruhan selepas ni

Thought for 4m 59s >

TAK BOLEH copy/deploy (Create Time 7:01PM).  codex

Sources

Compare with Claude ▾

**READMEBUILD.txt**  
Document

**ONEBOTREBUILDWORKF...**  
Document

READMEBUILD cuba baca readme build ni supaya awak tahu binaan senenar bot ni... dan ONEBOTREBUILDWORKFLOWTRACKER ialah file sebelumnya yang awak patut patuh untuk buat prompt kepada codex dan tugas sebenar awak, semak readme dan check apa yang kita tercicir, buat deep search

Thought for 1m 48s >

Dah baca **READMEBUILD + ONEBOTREBUILDWORKFLOWTRACKER**. Ini yang tercicir / belum kemas (berdasarkan dokumen, bukan andaian):

### 1) README "ACTIVE MODULE INVENTORY" masih belum diisi

READMEBUILD jelas kata inventory modul aktif mesti diisi hasil repo scan dan jadi "source of truth".  READMEBUILD

Kalau tak diisi, kita akan terus "tersasar" sebab modul aktif sebenar tak disenarai.

### 2) README "REBUILD STATUS DONE/PENDING" table belum diupdate

READMEBUILD suruh update status table supaya tak ulang kerja dan tak tambah feature atas build yang belum stabil.  READMEBUILD

Tracker pun tekankan benda sama (elak redo/mix output).  ONEBOTREBUILDWORKFLOWTRACKER

### 3) Keyname contract vs fail sebenar (ada mismatch)

READMEBUILD treat `keyname.conf.txt` sebagai senarai canonical yang wajib ikut.

 READMEBUILD

Tracker pun kata `keyname.conf.txt` "single source of truth".  ONEBOTREBUILDWORKFLOWTRACKER

Tapi "original file" yang anda bagi sebelum ni ialah **audit from pasted .conf only** (bukan canonical list sebenar). Itu punca Codex asyik tersasar.

### 4) "GLOBAL LOG MASTER CAP / global log override" belum dibuat

READMEBUILD cadang global master cap (global toggles + per-module toggles).

 READMEBUILD

Tracker ada plan global override keys ( `globalModuleLog/.../globalLogOverride` ) dan implement secara batch.  ONEBOTREBUILDWORKFLOWTRACKER

## 5) "AUTO schedule flags" wajib — perlu pastikan betul-betul dipakai oleh Scheduler

READMEBUILD wajib: scheduled/auto mesti pass `options.isAuto=1` +

`options.lastInboundAtMs` .  READMEBUILD

Ini perlu check dalam **SchedulerCV actual send call** (bukan sekadar OutboundGateway). (OutboundGateway memang nampak support `lastInboundAtMs` masuk `ratelimit.check`.)

 codex

## 6) PENDING sequence sebenar yang tinggal (ikut tracker)

Yang belum settle dalam tracker:

- **6G** Anti-miss reminders/escalation  ONEBOTREBUILDWORKFLOWTRACKER
- **6H** Audit / Journal view commands  ONEBOTREBUILDWORKFLOWTRACKER
- Optional: **7A**, **7B**, dan **Housekeeping**  ONEBOTREBUILDWORKFLOWTRACKER

## 7) Satu feature yang READMEBUILD sebut tapi tracker tak list jelas

READMEBUILD sebut **WClient/PIC mapping (multi-number / ownership)** sebagai target fallback.  READMEBUILD

Kalau belum ada, patut dimasukkan dalam tracker sebagai PENDING (atau letak bawah Optional yang sesuai).

Kalau kau nak aku "deep check" apa yang kita dah siap vs yang pending, step paling penting ialah isi **Active Module Inventory + Rebuild Status table** dulu (sebab itu yang kunci elak ulang).

Sources

    ... Compare with Claude ▾

ONEBOT\_CONTACT\_ACC...  
Document

ok boleh buat deep check, dan kita perlu sambung dari mana..WClient/PIC mapping (multi-number / ownership) tak semestinya WClient, sebab yang ni dah di bincangkan, ini ialah cari isi contact penuh dan apa kegunaannya antara contact dan Library yang simpan FILING / MEDIA SAVING (General) ini cara penyimpanan dia maksudnya tak semestinya kita guna

WClient tetapi ia guna lebih kepada cara profesional seperti mana dalam penerangan `contact_account` ni

Thought for 1m 31s >

Ok. Deep check summary + sambung dari mana:

### Yang dah "on track"

- Tracker sequence lepas 6F memang terus ke **6G**, kemudian **6H**, lepas tu barulah optional/add-on (**7A Contact/Account/Context Book**).  ONEBOTREBUILDWORKFLOWTRACKER  
 ONEBOTREBUILDWORKFLOWTRACKER

### Yang kita "tercicir" ikut READMEBUILD (punca asyik ulang)

- README minta **ACTIVE MODULE INVENTORY (source of truth) + REBUILD STATUS table (DONE/PENDING)** diisi hasil repo scan; kalau tak, memang senang drift & ulang file sama.  READMEBUILD
- Scheduler/AUTO rule wajib: job scheduler mesti pass `options.isAuto=1` + `options.lastInboundAtMs` (untuk active-chat block). Ini perlu confirm masa buat 6G.  READMEBUILD

### Pasal "WClient/PIC mapping" yang kau maksudkan

READMEBUILD sebut "WClient/PIC mapping" sebagai target, tapi maksud sebenar yang kau clarify sekarang ialah **Contact/Account/Context (ACC+PIC+CTX) + filing/media saving profesional**, bukan semestinya WClient.  READMEBUILD

Spec yang kau bagi memang tepat:

- Multi-PIC -> satu Account entity  ONEBOT\_CONTACT\_ACCOUNT\_CONTEXT\_...
- Filing/media saving ikut **Accounts/ACC.../Contexts/CTX.../**  ONEBOT\_CONTACT\_ACCOUNT\_CONTEXT\_...
- Library/Catalog cuma lookup; send ke customer tetap route melalui Fallback  ONEBOT\_CONTACT\_ACCOUNT\_CONTEXT\_...

### Sambung dari mana (order praktikal)

1. Isi dulu **ACTIVE MODULE INVENTORY + REBUILD STATUS** (repo scan sekali) supaya kita stop ulang-ulang.  READMEBUILD
2. Lepas tu buat **6G (Anti-miss reminders/escalation)**.  ONEBOTREBUILDWORKFLOWTRACKER
3. Lepas tu **6H (Audit/Journal view commands)**.  ONEBOTREBUILDWORKFLOWTRACKER
4. Bila semua stabil baru masuk **7A Contact/Account/Context Book** (ikut spec `contact_account` + filing + integration dengan Library/Fallback).

## Sources

 Compare with Claude ▾

ok boleh sambung repo, kalau nak buat untuk contact tu nanti saya ada save dekat repo dengan nama contactNaccount.txt mungkin codex boleh rujuk, sekarang kita sambung ikut squance mana yang perlu jalan sambung semula kerja tadi buat prompt macam biasa

Thought for 1m 16s >

TASK: 6G Implement Anti-miss reminders + escalation (DEPLOYABLE, max 3 files)

## SCOPE

- Implement ONLY 6G:
  - Remind ops/control group about unreplied OPEN DM tickets (no spam)
  - Escalate after longer threshold (still no spam)
- DO NOT touch keyname.conf.txt. DO NOT output any keyname list/audit.
- ASCII-only. ZERO HARDCODE (no IDs/text/prefix/template paths in JS).
- No foundation edits: Start.cmd, OneBot/Kernel.js, OneBot/Connector.js, any \*Hub

## MUST (NO GUESSING)

- 1) Follow active pointers and confirm exact runtime paths:
  - Fallback.conf -> FallbackHub.conf -> FallbackCV.js -> FallbackCV.conf
  - Scheduler.conf -> SchedulerHub.conf -> SchedulerCV.js -> SchedulerCV.conf (if AccessRoles (if escalation needs role members)
- 2) Use existing scheduler mechanism if present; only add a local timer in Fallback
- 3) Use ONLY existing canonical config keys already present in active confs (Fallback "BLOCKED: missing existing config keys for 6G settings" + list missing CONCEPT

## BEHAVIOR

- Ticket selection:
  - DM-origin tickets only
  - status OPEN only (use existing status fields / closed value already used by F
  - "unreplied" must be computed using existing stored fields only (do not invent
- Reminder send target:
  - send into control/ops group using existing send pipeline used by Fallback tic
  - reminders must not be blocked by outbound ratelimit windows (use existing byp
  - scheduled sends MUST pass options.isAuto=1 and options.lastInboundAtMs (per R

- No spam rules:
  - per ticket: do not remind again until remindEvery threshold
  - per run: limit batch size (use existing batch/max keys if available)
- Escalation:
  - after escalateAfter threshold, send escalation notice (reuse existing config)
  - do not escalate repeatedly more often than an escalation interval (reuse existing)

ada yang tak kena ke dia keluar report saja ni, apa yang dia tak dapat scan?

Thought for 58s >

Dia keluar **REPORT** sahaja sebab **Codex stop awal ikut arahan prompt**: dia jumpa `OneBot/modules/Core/Fallback/FallbackCV.js` **di disk**, tapi file tu **tak ada** `require('./FallbackReplyAVCV')` dan **tak ada wiring** `sendReplyAV`, jadi dia terus berhenti.  codex

Apa yang dia “tak dapat scan”?

Dia **tak dapat jumpa/verify versi FallbackCV.js** yang sepatutnya sudah ada **6D (ReplyAV)** dalam repo yang dia scan—sebab itu dia tak teruskan scan/merge untuk 6G dan tak output file deploy.  codex

Kalau nak unblock, ini **1 prompt REPORT sahaja** untuk Codex (cari mana versi ReplyAV sebenarnya berada + confirm active pointer), tanpa edit apa-apa:

TASK: Locate ReplyAV wiring version (REPORT ONLY)

SCOPE

- REPORT ONLY. NO CHANGES.
- Find where ReplyAV wiring exists in repo and confirm which FallbackCV.js is ACT

MUST

- 1) Follow active pointers:
Core/Fallback.conf -> Core/FallbackHub.conf -> implFile path actually used.
- 2) Search repo for: `require('./FallbackReplyAVCV')` and `sendReplyAV`
 - list all matching file paths + line numbers.
- 3) Report mismatch (if active implFile is a version without ReplyAV).

OUTPUT

REPORT

- Active implFile path
- Matches for ReplyAV wiring (paths+lines)

</> Plain text

Thought for 46s >

TAK BOLEH copy/deploy. Itu **REPORT sahaja** + audit tunjuk **active FallbackCV.js**
sekarang memang tak ada ReplyAV wiring (0 match FallbackReplyAVCV / sendReplyAV).

codex

TASK: RESTORE 6D ReplyAV wiring into ACTIVE Fallback (DEPLOYABLE, max 3 files)

SCOPE

- Fix ONLY: restore ReplyAV (audio/video/ptt) support in the ACTIVE Fallback impl
- MUST follow active pointers:
 Core/Fallback.conf -> Core/FallbackHub.conf -> implFile (active FallbackCV.js)
- Start from the CURRENT active FallbackCV.js ON DISK (do not use old pasted vers
- ASCII-only. ZERO HARDCODE (no meta.getService('send'), no hardcoded IDs/text/pr
- No foundation edits: Start.cmd, OneBot/Kernel.js, OneBot/Connector.js, any *Hub

FILES TO OUTPUT (MAX 3, EXACT PATHS)

- 1) OneBot/modules/Core/Fallback/FallbackCV.js
- 2) OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js (ONLY if router lacks
- 3) OneBot/modules/Core/Fallback/FallbackReplyAVCV.js (Create ONLY if missin

REQUIREMENTS

- Verify current repo state:
 - Confirm active implFile path matches OneBot/modules/Core/Fallback/FallbackCV.
 - Search for existing FallbackReplyAVCV.js and any AV dispatch in router.
- If FallbackReplyAVCV.js does NOT exist:
 - Create it using defensive duck-typing only:
 - require staffMsg.hasMedia === true AND typeof staffMsg.downloadMedia === 'f
 - detect kind via msg.type or msg._data.type in { audio, video, ptt }
- Wire ReplyAV:
 - FallbackReplyRouterCV.js must dispatch AV to deps.sendReplyAV (router firewal
 - FallbackCV.js must require('./FallbackReplyAVCV') and pass deps.sendReplyAV i
- Send service resolution:
 - MUST NOT hardcode "send".
 - Resolve via cfg.replyMediaSendPrefer first non-empty; else globalConf.sendPre
- Preserve existing features in current active file:
 - ReplyMedia, Quick replies (6F-A), QR placeholders (6F-B), routing/bind (6E) m
- Output FULL FILE BODY for each changed file only.
- No Summary/Testing/commit/PR text.

BLOCKED: missing FallbackReplyAVCV.js

tak mungkin missing sbb file ni ada dalam repo, tadi baru codex guna dah cukup 8 wire masalahnya saya tak pasti kenapa dia delete semula jadi 7, sekarang dia cakap FallbackReplyAVCV hilang pulak, tadi dah wire dalam fallbackcv.js 8 lepas tu tukar semula kepada 7 kenapa?

Thought for 1m 30s >

Ya, ada benda **tak kena** — tapi **bukan sebab Codex “tak dapat scan repo”**. Dia scan, **lepas tu stop** sebab ikut kontrak/prompt: dia jumpa `FallbackCV.js` atas disk yang **tak ada** `require('./FallbackReplyAVCV') / sendReplyAV`, jadi dia keluar **REPORT ONLY** dan berhenti.  codex

Yang buat kau nampak “8 wire jadi 7” ada **2 kemungkinan real** (dua-dua biasa jadi bila banyak round merge):

1. File ReplyAV handler masih ada, tapi wiring dalam `FallbackCV.js` kena overwrite oleh versi lain

Dalam `codex.txt` sendiri ada bukti wujud versi yang **ada AV wiring** (`const`

`FallbackReplyAVCV = require('./FallbackReplyAVCV');`).  codex

Dan router pun ada branch `mediaKind === 'av' → deps.sendReplyAV(...)` .

 codex

Tapi report yang "stop" tu bermaksud **versi atas disk masa itu** bukan versi yang ada wiring tadi.

2. File `FallbackReplyAVCV.js` memang ada, tapi Codex cari di path/folder yang lain (duplicate tree)

Pointer aktif dia guna `modules/Core/Fallback/FallbackCV.js` (bukan semestinya path yang sama kau tengok). Bila ada 2 salinan folder (contoh `OneBot/modules/...` vs `Modules/...`), Codex boleh scan yang "aktif" tapi yang kau tengok bukan yang itu.

Kalau kau nak confirm cepat (tanpa buat prompt baru), di repo/live server buat 2 carian ni:

- cari fail: `FallbackReplyAVCV.js` (pastikan cuma **1 lokasi**)
- cari string wiring: `require('./FallbackReplyAVCV')` dan `sendReplyAV`

Kalau hasil carian tunjuk file ada tapi wiring tak ada, maksudnya **wiring memang ter-overwrite** (8→7).

Sources

    ... Compare with Claude 

buat prompt minta codex cari semula, saya cuba guna sesi baru codex mungkin sebab sesi terlalu panjang penyebab dia bermasalah.. pastikan buat prompt dengan permintaan detail sebab bila tukar sesi baru mungkin codex ni tak simpan memori sesi lama

TASK: Locate `FallbackReplyAVCV.js` + restore 6D wiring in ACTIVE Fallback (SCAN FI

SCOPE

- You are in a NEW session. Do NOT assume any prior context.
- Step 1: SCAN the repo ON DISK and REPORT where ReplyAV handler + wiring exist/m
- Step 2: If ReplyAV handler exists, output a DEPLOYABLE patch (FULL FILE BODY) t
- ASCII-only. ZERO HARDCODE. No Hub/Foundation edits. No keyname audit/list. No S

STEP 1 (REPORT REQUIRED BEFORE ANY FILE OUTPUT)

A) Confirm ACTIVE pointer chain (exact paths):

- `OneData/bots/ONEBOT/config/modules/Core/Fallback.conf`
-> `OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf`
-> `implFile` (active `FallbackCV.js` path)
-> `implConfig` (active `FallbackCV.conf` path)

B) Search repo for ReplyAV handler file candidates:

- Find all files named: FallbackReplyAVCV.js (and any FallbackReplyAV*.js)
- Output list: <path> (exists) with file size and first/last line numbers if available

C) Search repo for ReplyAV wiring markers:

- All matches for:
 - require('./FallbackReplyAVCV')
 - sendReplyAV
 - deps.sendReplyAV
 - mediaKind === 'av' (or equivalent)
- Output list: <path>:<line> (max 2-line excerpt each)

D) Verdict (ONE line):

- UNBLOCKED: handler exists + active implFile missing wiring (needs restore)
- or BLOCKED: handler missing in repo (must create)
- or BLOCKED: multiple conflicting handler files (need decision)

STOP CONDITIONS

- If STEP 1 verdict is BLOCKED for any reason: STOP after REPORT (no file bodies)
- If STEP 1 verdict is UNBLOCKED: proceed to STEP 2.

STEP 2 (DEPLOYABLE, MAX 2 FILES)

GOAL: Restore 6D ReplyAV (audio/video/ptt) in the ACTIVE fallback chain WITHOUT r

FILES TO OUTPUT (MAX 2, EXACT PATHS)

- 1) <active implFile path from Step 1> (FallbackCV.js)
- 2) OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js (ONLY if active router)

REQUIREMENTS FOR STEP 2

- Start from the CURRENT on-disk versions of the target files (do not paste old v
- Preserve existing features in those files (ReplyMedia, 6E bind/move, 6F quick r
- Add/restore:
 - require('./FallbackReplyAVCV') in FallbackCV.js
 - wire deps.sendReplyAV into reply router deps (same pattern as sendReplyMedia)
 - router dispatch for AV kinds via ctx.message.type or ctx.message._data.type i
 - options for staff reply send: { isAuto:0, manualReply:1, bypassRateLimit:1 }
- Do NOT hardcode 'send' anywhere; keep existing send service resolution behavior

FallbackReplyAVCV.js  
JavaScript

<https://github.com/neprenkha/whatsappbot/blob/main/OneBot/modules/Core/Fallback/FallbackReplyAVCV.js> ini file dia kan, kenapa codex cari tak jumpa

Thought for 1m 25s >

Ya — link tu memang **patutnya** fail handler ReplyAV ( `FallbackReplyAVCV.js` ), dan kandungan yang kau upload pun memang module ReplyAV yang betul (export `sendToCustomer` , resolve send service ikut `replyMediaSendPrefer / globalConf.sendPrefer` ).  `FallbackReplyAVCV`  `FallbackReplyAVCV`

Kenapa Codex “cari tak jumpa” walaupun GitHub ada? Biasanya sebab ni:

**1. Codex scan workspace local dia, bukan GitHub link.**

Kalau sesi baru tu buka snapshot repo yang **tak include commit/file** tu, dia memang akan report “missing” walaupun file ada dekat GitHub.

**2. Workspace dia bukan branch/commit yang sama dengan main GitHub (atau dia guna folder lain/clone lain).**

So file ada dekat GitHub tapi **tak ada dalam folder yang Codex sedang scan.**

**3. Path/case mismatch** (contoh `modules` vs `Modules` , atau file name lain). Ini selalu jadi bila environment scan di Linux (case-sensitive).

Nota penting: dalam `codex.txt` yang kau bagi, ada versi `FallbackCV.js` yang memang `require('./FallbackReplyAVCV')` (maknya pada satu masa Codex memang pernah ada wiring itu).  `codex`

Jadi masalah sekarang bukan “file tak wujud di dunia”, tapi **workspace/snapshot** yang Codex session baru tengah baca **tak sama.**

Kalau kau nak confirm cepat pada Codex session baru: suruh dia **report path** **ACTIVE** **implFile** + **list semua path** **FallbackReplyAVCV.js** **yang wujud on-disk** (case-insensitive).  
Jika list kosong, maksudnya memang **repo copy dia belum ada file tu** (walaupun GitHub ada).

TAK BOLEH COPY/DEPLOY (9:05AM)

- FallbackCV.js versi ini **wajib ada** key `cmdBindTag` , `cmdMoveTicket` , `bindMapStoreKey`
 codex
- Tapi FallbackCV.conf yang Codex pernah keluarkan guna **set lain**: `cmdGroup` , `actionAdd` , `actionDel` , `storeKey`  codex
 → Kalau deploy file 9:05AM tanpa selaraskan config, module akan **disabled missing_keys**  codex

TASK: FIX VERSION MISMATCH (DEPLOYABLE, SINGLE OUTPUT SET, MAX 3 FILES)

GOAL

- Produce ONE consistent deployable set for active Fallback (code+conf must match)
- NO REPORT. Output full raw file bodies only.
- ASCII-only. ZERO HARDCODE (no new literal messages except existing conf values;
- Do NOT touch Hub/Foundation.

STEPS (MANDATORY)

1) Read current active pointers:

- OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf (`implFile` + `implCon`
- Open the active `implConfig` file (FallbackCV.conf) and IDENTIFY which admin c
 A) `cmdBindTag/cmdMoveTicket/bindMapStoreKey`
 OR
 B) `cmdGroup/actionAdd/actionDel/storeKey`
- Do NOT guess. Use what is in the conf file.

2) Make code match the conf scheme found:

- If scheme A: keep `onBindTag/onMoveTicket` in `FallbackReplyRouterCV` and requir
- If scheme B: implement admin parse for `cmdGroup/actionAdd/actionDel` in Fallb
- Ensure FallbackCV.js `required[]` EXACTLY matches keys that exist in the conf

3) Preserve existing working features:

- `ReplyText` + `ReplyMedia` + `ReplyAV` wiring (no regress)
- `groupKey` routing must be used when choosing target group
- quick replies (teach/send) + QR placeholders on ticket card (QR1/QR2/QR3)
- manual/bypass flags for staff replies remain intact

4) Validate:

- `node --check` on any changed JS files.

FILES TO OUTPUT (MAX 3)

- 1) OneBot/modules/Core/Fallback/FallbackCV.js
- 2) OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js
- 3) OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf (ONLY if you must

BOLEH COPY & DEPLOY (2 fail ni):

- OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js  codex  codex
- OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf  codex

TASK: 6G DISCOVERY REPORT ONLY (Anti-miss reminders + escalation) - NO CHANGES

SCOPE

- REPORT ONLY. NO CODE/CONF CHANGES.
- Follow active pointers and prove the correct place/keys to implement 6G (no gue

MUST (EVIDENCE: path + line)

1) Confirm active pointers:

- OneData/bots/ONEBOT/config/modules/Core/Fallback.conf
 - > OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf (implFile + implCon
- OneData/bots/ONEBOT/config/modules/Core/Scheduler.conf
 - > OneData/bots/ONEBOT/config/modules/Core/SchedulerHub.conf (implFile + implCo

2) Ticket state evidence (Fallback):

- Where ticket objects are stored (store key + shape)
- Fields available to decide "unreplied" and "last activity"

3) Scheduling mechanism evidence:

- How SchedulerCV triggers tasks (service API + how modules register jobs)
- Whether any existing recurring job pattern exists in repo

4) Reminder target routing:

- How to send reminder into ops/control group for a ticket (groupKey -> chatId pa
- Confirm how WorkGroups.resolve() is used (return shape)

5) Config keys re-use (NO new keynames):

- List existing canonical keys already present in SchedulerCV.conf / FallbackCV.c
- enable, delayMs/tickMs, batch max, attempts, quiet hours (if any)
- If missing, list ONLY missing CONCEPTS (do not propose new keys yet)

OUTPUT

REPORT

- A) Active pointers (exact paths)
- B) Ticket fields + store evidence
- C) Scheduler capability evidence
- D) Routing path evidence
- E) Existing keys available for 6G controls
- F) Minimal patch plan (2-3 files) using only existing keys

Thought for 1m 34s >

TAK BOLEH COPY/DEPLOY (Create Time 9:56AM) — ini **REPORT sahaja**, tak ada full file body untuk paste live. 📄 codex

TASK: 6G UNBLOCK - Find existing keys/values we can reuse (REPORT ONLY)

SCOPE

- REPORT ONLY. NO CODE/CONF CHANGES.

- DO NOT output keyname list/audit. DO NOT edit keyname.conf.txt.
- Goal: unblock 6G by finding EXISTING keys + EXISTING values in current conf fil
 - unreplied-age threshold
 - reminder batch max
 - reminder attempts limit
 - quiet-hours window

MUST

1) Confirm active pointers (exact paths):

- Fallback.conf -> FallbackHub.conf -> implFile -> implConfig
- Scheduler.conf -> SchedulerHub.conf -> implFile -> implConfig

2) Scan ALL impl conf files under:

- OneData/bots/ONEBOT/config/modules/Core/Impl/*.conf

for candidate keys (and values) that can represent 6G controls.

Search for keys containing any of:

delay, due, interval, tick, batch, max, attempts, retry, quiet, window, start, en

3) Output a mapping proposal using ONLY keys that already exist in those conf fil

- unrepliedAfterMs -> <existingKey> (value from file)
- remindBatchMax -> <existingKey> (value from file)
- maxAttempts -> <existingKey> (value from file)
- quietHours -> <existingKey(s)> (value(s) from file)

4) If you cannot find existing keys/values to cover a concept:

- Output: BLOCKED: missing existing config keys for 6G
- List ONLY missing concepts (no new key proposals)
- STOP.

OUTPUT FORMAT (STRICT)

REPORT

A) Active pointers (paths)

B) Candidate keys found (file:path:line key=value)

C) Proposed reuse mapping (concept -> existing key)

codex.txt

Document

Thought for 4m 53s >

Tak boleh copy/deploy — yang 10:16AM tu **REPORT sahaja**, tak ada full file body untuk paste ke live.  codex

Ini **prompt next sequence** (single prompt) untuk Codex terus buat **fix/implement 6G** ikut mapping report tu  codex :

TASK: 6G IMPLEMENT (Anti-miss reminders + escalation) - DEPLOYABLE (MAX 2 FILES)

HARD RULES

- DO NOT GUESS. Always scan repo first.
- ASCII-only. ZERO HARDCODE (no ids, no new fixed text templates inside JS).
- No keyname.conf.txt output/edit. No reports. Output FULL FILE BODIES ONLY.
- Max 2 files changed in this task.

GOAL

Implement 6G "anti-miss reminders + escalation" (AUTO only, respects active-chat

- unrepliedAfterMs -> SchedulerCV.conf defaultDelayMinutes=60 (convert to ms)
- remindBatchMax -> OutboxCV.conf batchMax=5
- maxAttempts -> OutboxCV.conf maxAttempts=5
- quietHours -> RateLimitCV.conf window.1/window.2 (enforceWindows=0 currently)

(No new keynames; use only canonical keys from keyname.conf.txt.)

STEP 1: CONFIRM ACTIVE POINTERS (MUST, BUT NO REPORT OUTPUT)

- Confirm chain:
 - OneData/bots/ONEBOT/config/modules/Core/Fallback.conf -> modules/Core/FallbackH
 - FallbackHub.conf -> implFile=modules/Core/Fallback/FallbackCV.js, implConfig=mo
- Read current FallbackCV.conf and FallbackCV.js as baseline.

STEP 2: MAKE IT CONFIG-DRIVEN WITHOUT NEW KEYNAMES

- Add ONLY these canonical keys into OneData/bots/ONEBOT/config/modules/Core/Impl
 - tickMs=60000 (from SchedulerCV.conf intervalMs)
 - delayMs=3600000 (defaultDelayMinutes=60 -> ms)
 - dueBatchMax=5 (from OutboxCV.conf batchMax)
 - maxAttempts=5 (from OutboxCV.conf maxAttempts)
 - controllers= (optional; leave empty if unknown; do NOT invent va
- Do NOT add any other new keys.

STEP 3: IMPLEMENT 6G ENGINE IN FallbackCV.js (NO OTHER MODULES)

In OneBot/modules/Core/Fallback/FallbackCV.js:

A) Required keys:

- Ensure required[] includes: tickMs, delayMs, dueBatchMax, maxAttempts
- controllers is OPTIONAL (must NOT be required).

B) Reminder state:

- Use in-memory Map reminderState (ticketId -> { sentCount, escalated, nextAt }).
- Never write reminder state into ticket object unless already present in current

C) When to start tracking:

- On DM inbound that creates/updates an OPEN ticket:
 - set/refresh reminderState[ticketId].nextAt = updatedAtMs + delayMs
 - updatedAtMs must come from ticket.updatedAt if present; otherwise use Date.now
- On successful staff reply (text/media/av) to customer:
 - clear reminderState for that ticketId.

D) Reminder tick loop:

- setInterval(runReminderTick, tickMs) AFTER module init success.
- runReminderTick must:
 - 1) Load tickets from JsonStore (existing ticketStoreSpec + key).
 - 2) Filter OPEN tickets only.
 - 3) Compute due list where now >= state.nextAt.
 - 4) Limit sends per tick to dueBatchMax.
 - 5) For each due ticket:
 - Render ticket card using existing ticketCard.render (NO new message template)
 - Send to ops/control group chatId using existing resolver (current target group)
 - Send options MUST be AUTO:

```
{ isAuto: 1, manualReply: 0, bypassRateLimit: 0, lastInboundAtMs: <best-known>
```

 - lastInboundAtMs: if MessageJournal service provides last inbound for the ticket, else fallback to ticket.updatedAtMs (do not guess service name; detect by service name)
 - Increment sentCount and set nextAt = now + delayMs.
 - If sentCount >= maxAttempts and not escalated:
 - Mark escalated=1 and nextAt=MAX_SAFE_INTEGER (stop repeating).
 - OPTIONAL: if cfg.controllers non-empty, send ONE extra message to ops group

E) Quiet hours:

- If RateLimit.enforceWindows is 1, you MAY skip reminders outside configured windows
- If enforceWindows is 0 (current), do NOT apply quiet-hour suppression.

F) Safety:

- No spam: respect dueBatchMax + maxAttempts strictly.
- No hardcoded strings except existing log tags; no new templated body like "{CONTEXT}"

STEP 4: VALIDATE

- node --check on changed JS.
- Ensure module does not disable due to missing keys.

OUTPUT FORMAT (STRICT)

Thought for 3m 31s &gt;

**TAK BOLEH copy/deploy (Create Time 10:43AM) — jangan paste ke live:**

- OneBot/modules/Core/Fallback/FallbackCV.js  codex  codex
- OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf  codex

Sebab ringkas:

- Ada **hardcoded conf path** modules/Core/Impl/RateLimitCV.conf dalam code (langgar zero-hardcode path).  codex
- Routing burst masih guna resolveTargetGroup(entry.ctx) (abaikan ticket.groupKey bila move/bind).  codex

**PROMPT untuk Codex betulkan (1 prompt sahaja)**

TASK: FIX 10:43AM FallbackCV.js (DEPLOYABLE, 1 file only) - remove hardcoded Rate

SCOPE

- Change ONLY: OneBot/modules/Core/Fallback/FallbackCV.js
- Start from CURRENT on-disk active FallbackCV.js (the one that already has Reply
- ASCII-only. ZERO HARDCODE (no hardcoded config/template paths).
- Output MUST be copy/paste deploy: FULL RAW FILE BODY only. No report.

MUST

1) Remove hardcoded RateLimit config path:

- Delete any meta.loadConfRel('modules/Core/Impl/RateLimitCV.conf') usage.
- If you can PROVE an existing config key already present in cfg/globalConf that
- If you cannot prove such key exists, then do NOT apply window gating (always al

2) Use groupKey routing everywhere (no guessing):

- Implement async resolveTargetGroup(workgroupKey, ctx):
  - If meta.getService('workgroups') exists and has async resolve(key, ctx), reso

- If resolve returns empty, fallback to FallbackGroupRouterCV.resolveTargetGroup
- In scheduleBurstFlush: use entry.groupKey first (fallback cfg.defaultGroupKey)
- In runReminderTick: use ticket.groupKey first (fallback cfg.defaultGroupKey) wh

### 3) Preserve existing features (NO REGRESSION):

- Keep ReplyAV wiring (require('./FallbackReplyAVCV') and sendReplyAV deps).
- Keep quick reply teach/send wiring.
- Keep reminder options: isAuto=1 + lastInboundAtMs.

BLOCKED: missing existing 6E command keys in  
FallbackCV.conf dia kata apa ni? ke sebab saya belum  
update repo

Thought for 34s >

Maksud "**BLOCKED: missing existing 6E command keys in FallbackCV.conf**" ialah:

Codex baca **FallbackCV.conf** yang sedang aktif, tapi dalam file tu **tak jumpa key command untuk 6E** (contoh bind/move). Dalam report dia pernah nampak **hanya cmdReply=!r sahaja** dan "no other cmd\* keys".  codex

Jadi ya — **besar kemungkinan sebab repo/live kau belum update** (atau telah ter-overwrite balik ke conf lama), sebab conf yang "betul untuk 6E" sepatutnya ada key macam ni:

`cmdBindTag , cmdMoveTicket , bindMapStoreKey .`  codex

Kalau nak confirm cepat kat live:

- buka **active** OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf
- cari ada tak baris `cmdBindTag= / cmdMoveTicket= / bindMapStoreKey=`  
Kalau tak ada, memang itu punca Codex "BLOCKED".

Sources

    ... Compare with Claude ▾

**FallbackCV.conf**  
File

repo pon saya baru upload yang ni dan dah update

Thought for 58s >

Aku dah check file yang kau upload `/mnt/data/FallbackCV.conf` — **6E command keys memang ADA** dalam conf tu:

- `cmdReply=!r`
- `cmdBindTag=!bind`
- `cmdMoveTicket=!move`
- `bindMapStoreKey=Fallback/bindMap`
- `defaultGroupKey=ops`

So bila Codex cakap **"BLOCKED: missing existing 6E command keys in FallbackCV.conf"**, maksudnya **Codex sebenarnya tengah baca conf yang lain** (contoh: pointer `FallbackHub.conf` still point ke conf lama / path lain), bukan file conf yang kau baru update tu.

Kalau nak kasi dia "confirm" cepat dalam sesi baru: suruh Codex print **exact** `implConfig path` dari `FallbackHub.conf` + dump 5 line keys atas tu dari file yang dia baca. Kalau path/keys tak match, itu punca.

Nota kecil: beberapa file lama yang pernah upload sebelum ni ada yang dah expired dalam session ni—kalau nanti aku perlu rujuk file lama lain, kau kena upload semula.

    ... Compare with Claude 

takpe boleh buat prompt aku dah update file latest dekat repo

Thought for 28s >

Baik. (Nota cepat: ada beberapa fail upload lama dalam chat ni yang dah expired—kalau nanti kau nak aku semak balik kandungan fail tertentu, upload semula je. Untuk prompt ni tak perlu sebab kau kata repo dah update.)

TASK: MERGE 6E BACK into CURRENT active Fallback (KEEP 6G+6F+6D) - DEPLOYABLE, MA

SCOPE

- You are in a NEW session. Do NOT assume any prior context.
- Goal: Fix ONLY the active fallback so it keeps:
  - 6G reminders (auto anti-miss)
  - 6F quick replies (!1/!2/!3 + teach)
  - 6D ReplyAV + ReplyMedia + ReplyText

- RESTORE 6E bind/move (cmdBindTag/cmdMoveTicket) without regress.
- ASCII-only. ZERO HARDCODE (no IDs/text/prefix/template/conf paths in JS).
- Do NOT output keyname audit/list. Do NOT edit keyname.conf.txt.
- No Hub/Foundation edits.

#### MUST (NO GUESSING)

1) Follow active pointers and use ON-DISK files as baseline:

- OneData/bots/ONEBOT/config/modules/Core/Fallback.conf  
-> OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf (implFile + implCon
- Open implConfig (FallbackCV.conf) and confirm these keys EXIST (exact key names cmdReply, cmdBindTag, cmdMoveTicket, bindMapStoreKey, defaultGroupKey  
If any missing: OUTPUT REPORT ONLY "BLOCKED: active FallbackCV.conf missing 6E

2) Open current on-disk router:

- OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js
- Check if it already parses bind/move and calls deps.onBindTag / deps.onMoveTick
  - If YES: do NOT change router.
  - If NO: update router to parse bind/move using ONLY cfg.cmdBindTag and cfg.cmd  
Then call deps.onBindTag/deps.onMoveTicket.

#### FILES TO OUTPUT (MAX 2)

- 1) OneBot/modules/Core/Fallback/FallbackCV.js
- 2) OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js (ONLY if needed per ste

#### REQUIREMENTS

A) Preserve existing working features (NO REGRESSION)

- Keep ReplyAV wiring: require('./FallbackReplyAVCV') + deps.sendReplyAV
- Keep ReplyMedia wiring + deps.sendReplyMedia
- Keep ReplyText wiring + deps.sendReplyText
- Keep quick replies wiring: deps.onQuickTeach + deps.onQuickSend (if router uses
- Keep QR placeholders/ticket card behavior if already present in current file.

B) Restore 6E bind/move logic in FallbackCV.js

- Provide deps handlers that router calls:
  - onBindTag({ tag, workgroupKey, ctx, source })
  - onMoveTicket({ ticketId, workgroupKey, ctx, source })
- Persist bind map using existing store service (JsonStore) with cfg.bindMapStore
  - NO hardcoded file paths.
- Move:
  - await workgroups.resolve(workgroupKey, ctx) (workgroups service is async)
  - update ticket.groupKey = workgroupKey
  - update ticket.updatedAt = Date.now()
- Bind:
  - store mapping tag -> workgroupKey
- Wrong-group tips:
  - Use existing configured reply keys ONLY if already in current config/template
  - If no configured reply exists, stay silent (no new hardcoded text).

C) groupKey routing must be used consistently

- scheduleBurstFlush: choose target group using entry.groupKey (fallback cfg.defa
- reminders (6G): choose target group using ticket.groupKey (fallback cfg.default
- DO NOT call resolveTargetGroup(entry.ctx) without considering groupKey.

- D) No hardcoded conf paths
- Do NOT load RateLimit conf via a string literal path.
  - If you cannot obtain ratelimit window settings from existing config keys, do NO

E) Validation

- node --check on any changed JS file(s).
- Output MUST be copy/paste deploy: FULL RAW FILE BODY only, with Path header for
- NO Summary/Testing/commit/PR text.

OUTPUT FORMAT (STRICT)

CHANGED FILES

Path: <exact path>

....

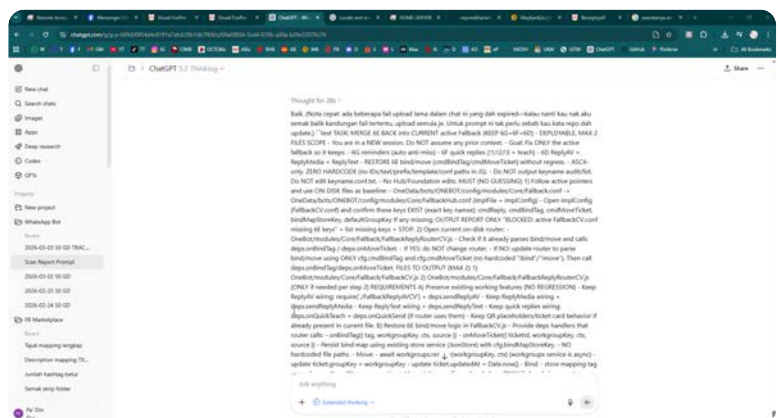

</> Plain text

STOP.

... Compare with Claude v

aku nak prompt kau buat cantik sikit kerja ni bukan prompt mana button copy code macam biasa tu

Thought for 14s >

TASK: MERGE 6E BACK (KEEP 6G+6F+6D) - DEPLOYABLE, MAX 2 FILES

SCOPE

- NEW SESSION: do not assume any prior context.

- Goal: restore 6E bind/move into the ACTIVE fallback without regressing existing
  - Keep 6G reminders (AUTO anti-miss)
  - Keep 6F quick replies (!1/!2/!3 + teach) + QR placeholders on ticket card (if
  - Keep 6D ReplyAV + ReplyMedia + ReplyText
  - Restore 6E bind/move commands using `cfg.cmdBindTag` / `cfg.cmdMoveTicket`

#### HARD RULES

- ASCII-only
- ZERO HARDCODE: no hardcoded IDs/text/prefix/template/conf paths in JS (no liter
- Do NOT output keyname list/audit. Do NOT edit `keyname.conf.txt`.
- Do NOT edit `Start.cmd`, `OneBot/Kernel.js`, `OneBot/Connector.js`, any `*Hub.js` logic
- Output MUST be copy/paste deploy: FULL RAW FILE BODY only (no Summary/Testing/c

#### STEP 1 (MUST SCAN, BUT DO NOT OUTPUT THIS SCAN)

- Follow active pointers:
  - `OneData/bots/ONEBOT/config/modules/Core/Fallback.conf`
  - > `OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf` (`implFile` + `implCon`
- Open the ACTIVE `implConfig` (`FallbackCV.conf`) and confirm these exact keys exist
  - `cmdReply`, `cmdBindTag`, `cmdMoveTicket`, `bindMapStoreKey`, `defaultGroupKey`
- If any missing: OUTPUT REPORT ONLY:
  - "BLOCKED: active `FallbackCV.conf` missing keys: <list>"
  - STOP.

#### STEP 2 (IMPLEMENT / MERGE)

##### A) Router capability check

- Open current on-disk: `OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js`
- If router already parses bind/move and calls `deps.onBindTag` / `deps.onMoveTicket`
  - Do NOT change router.
- Else:
  - Update router to parse bind/move using ONLY `cfg.cmdBindTag` and `cfg.cmdMoveTic`
  - Dispatch to `deps.onBindTag` / `deps.onMoveTicket`
  - Keep all existing reply flows (text/media/av) and quick replies intact.

##### B) Restore 6E handlers + wiring in ACTIVE `FallbackCV.js`

- Start from CURRENT on-disk active `implFile` (`FallbackCV.js`). Do NOT paste old ve
- Ensure `replyRouter.create(...)` `deps` includes:
  - `onBindTag`
  - `onMoveTicket`
  - (and keep existing `deps`: `sendReplyText`, `sendReplyMedia`, `sendReplyAV`, `onQuickT`
- Implement:
  - `onBindTag({ tag, workgroupKey, ctx, source })`
    - persist mapping tag -> `workgroupKey` using existing store service
    - store key MUST be `cfg.bindMapStoreKey` (no hardcoded file paths)
  - `onMoveTicket({ ticketId, workgroupKey, ctx, source })`
    - await `workgroups.resolve(workgroupKey, ctx)` if `workgroups` service exists
    - update `ticket.groupKey = workgroupKey`
    - update `ticket.updatedAt = Date.now()`
- `groupKey` routing MUST be used consistently:
  - `scheduleBurstFlush()`: target group uses `entry.groupKey` first, else `cfg.default`
  - reminders (6G): target group uses `ticket.groupKey` first, else `cfg.defaultGrou`
- Do NOT add any new required keys. Do NOT disable module if optional keys missin

FILES TO OUTPUT (MAX 2)

BLOCKED: active FallbackCV.conf missing keys:  
cmdBindTag, cmdMoveTicket, bindMapStoreKey

Thought for 45s >

Itu maksudnya FallbackHub.conf sedang point ke FallbackCV.conf yang lama/berbeza — conf aktif yang Codex baca memang tak ada cmdBindTag, cmdMoveTicket, bindMapStoreKey, sebab tu dia STOP.

Ini 1 prompt sahaja untuk Codex betulkan conf aktif (1 file) dan bagi output copy/paste:

TASK: FIX ACTIVE FallbackCV.conf missing 6E keys (DEPLOYABLE, 1 file only)

SCOPE

- Fix ONLY the ACTIVE FallbackCV.conf (the implConfig pointed by FallbackHub.conf
- Append-only add missing keys: cmdBindTag, cmdMoveTicket, bindMapStoreKey.
- ASCII-only. No keyname audit/list. No Summary/Testing/commit/PR.

- Output MUST be copy/paste deploy: FULL RAW FILE BODY only.

#### STEPS (MANDATORY)

##### 1) Read active pointer:

OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf

- Extract implConfig path (this is the ONLY conf to edit).

##### 2) Open that ACTIVE implConfig file.

- If any of these keys already exists, DO NOT add duplicates:  
cmdBindTag, cmdMoveTicket, bindMapStoreKey

##### 3) Find values (NO GUESSING PREFERRED):

- Search the workspace for any other FallbackCV.conf (or fallback impl conf) t  
cmdBindTag= , cmdMoveTicket= , bindMapStoreKey=  
- If found, copy EXACT values from the best match (same bot/data tree).

##### 4) If not found anywhere in workspace:

- Use these defaults INSIDE CONF (not JS):  
cmdBindTag=!bind  
cmdMoveTicket=!move  
bindMapStoreKey=Fallback/bindMap

##### 5) Append the missing key lines at the END of the ACTIVE implConfig file (append-

- Do NOT reorder existing lines.

#### FILES TO OUTPUT (EXACTLY 1)

- 1) <the exact implConfig path read from FallbackHub.conf>

#### OUTPUT FORMAT (STRICT)

saya ad test dekat whatsapp tapi You are not allowed to run this command., apa kita kena buat, dan apa kena buat next prompt untuk codex

Thought for 1m 55s >

Masalah “You are not allowed to run this command.” biasanya 2 benda je:

1. Group yang kau test tu bukan control group yang command dibenarkan, atau

- 2. Nombor kau belum assign role yang dibenarkan (AccessRoles/roles store) — jadi command kena block.**

## Next prompt untuk Codex (TASK) — cari punca & fix (max 3 files, deployable)

TASK: Fix "You are not allowed to run this command" (DEPLOYABLE, max 3 files)

### SCOPE

- New session: do not assume prior context.
- Fix ONLY command permission denial in WhatsApp (AccessRoles / wrong-group gatin
- ASCII-only. ZERO HARDCODE (no IDs/phone/group in JS; config/data is OK).
- Output MUST be copy/paste deploy: FULL RAW FILE BODY only. No summary/testing/c

### MUST (NO GUESSING)

1) Find the exact source of these strings in repo:

- "You are not allowed to run this command"
- "You are not allowed to reply"
- "Unknown command"

Report internally but DO NOT output a report; use it to patch.

2) Follow active pointers and identify which module enforces command permission:

- AccessRoles (or equivalent) active implFile + implConfig
- Any command router that blocks non-control-group usage

3) Determine why it blocks:

- A) Wrong group: command allowed only in controlGroupId / allowGroups
- B) Role missing: sender phone not in allowed role for that command

### FIX RULES

- If it is WRONG GROUP:
  - Update ONLY the ACTIVE conf that holds controlGroupId / allowed group setting
  - Do NOT hardcode groupId in JS.
- If it is ROLE MISSING:
  - Update ONLY the ACTIVE roles store/data file (JsonStore) OR the ACTIVE Access
  - Put the admin phone(s) as DATA in config/store (not in JS).
  - Keep existing role names and permission checks.

### FILES TO OUTPUT (MAX 3, EXACT PATHS)

- The minimal set needed based on what you found, e.g.:
  - 1) OneData/bots/ONEBOT/config/modules/Core/Impl/AccessRolesCV.conf (or active i
  - 2) The active roles store data file (JsonStore json) if used
  - 3) The exact module file ONLY if bug exists (avoid touching code if config/data

### OUTPUT FORMAT (STRICT)

Kalau Codex dah bagi output, hantar `codex.txt` tu – aku akan jawab ringkas macam

Compare with Claude ▾

codex.txt

Document

Thought for 5m 41s &gt;

Itu error memang **permission/role**.

Dalam `WorkGroupsCV.js`, command akan block kalau **tak lepas** `isAllowed(ctx)` (`minRole`) dan dia akan balas `replyNoAccess` (ini yang keluar “You are not allowed to run this command.”).  codex

Dan untuk reply `!r`, `FallbackCV.conf` memang lock `minRoleTicketReply=staff` → kalau role kau bukan staff, memang keluar “You are not allowed to reply.”  codex

## Apa kita kena buat (paling tepat)

### 1. Pastikan role system (AccessRoles) betul-betul bootstrapped untuk nombor kau.

Dalam `AccessRolesCV.conf` sekarang dia guna `bootstrapFirstOwner=1` +  
`ownerSeedList=lid:82828612100333` .  codex

Kalau `lid` tu bukan account kau, kau akan kekal **viewer** → semua command `minRole` akan block.

### 2. Unblock cara untuk kau tahu “ID sebenar” (lid/phone/chatId) yang AccessRoles guna, sebab sekarang itu yang susah.

## Next prompt untuk Codex (UNBLOCK roles — buat sekali, deployable)

TASK: UNBLOCK AccessRoles so admin can self-identify + bootstrap owner (DEPLOYABLE)

### SCOPE

- Fix ONLY AccessRoles to resolve "You are not allowed to run this command" due to
- New session. Scan ON DISK.
- ASCII-only. ZERO HARDCODE in JS (no phone/group id hardcoded in code).
- Output FULL FILE BODY only. No report text. No CONTRACT FAILED.

MUST (SCAN, BUT DO NOT OUTPUT SCAN)

1) Follow active pointers:

- OneData/bots/ONEBOT/config/modules/Core/AccessRoles.conf  
-> OneData/bots/ONEBOT/config/modules/Core/AccessRolesHub.conf (implFile + impl

2) Open active implFile (AccessRolesCV.js) and active implConfig (AccessRolesCV.c

### GOAL

A) Make "!role me" ALWAYS allowed in control group (even if user has no role yet)

- actionMe must not require access check.
- Reply should include BOTH:
  - current role (or defaultRole)
  - the exact sender identifier key AccessRoles uses for assignments (e.g. lid:..
- DO NOT hardcode message text in JS: use cfg.msgMe template only.
- You may extend msgMe template placeholders to include {idKey} (config text), an

B) Bootstrap owner safely (no security loosen outside control group):

- If bootstrapFirstOwner=1 AND store has NO owner/admin yet:
  - allow first caller in control group to become owner (or highest role used in
  - OR if ownerSeedList is set, only seed if caller idKey matches ownerSeedList e
- Do NOT add new config keys; reuse existing keys already in AccessRolesCV.conf: bootstrapFirstOwner, ownerSeedList, defaultRole, cmdRole/actionMe, msgMe.

FILES TO OUTPUT (MAX 2)

- 1) OneBot/modules/Core/AccessRoles/AccessRolesCV.js (active implFile path)
- 2) OneData/bots/ONEBOT/config/modules/Core/Impl/AccessRolesCV.conf (ONLY if msgMe

File

dah detect owner tapi patut owner full access mana boleh  
ada yang not allowed

Thought for 2m 31s &gt;

Owner dah detect, tapi masih "not allowed" sebab **API AccessRoles** tak serasi dengan cara modul lain check role:

- FallbackCV.js buat permission check dengan **hantar** ctx **object** ke  
access.hasRole(ctx, role) / access.isAllowed(ctx, role) /  
access.meetsMinRole(ctx, role) .  codex
  - AccessRolesCV.js pula implement hasRole(userId, reqRole) dan  
hasAtLeast(userId, minRole) yang **expect** userId **string**, bukan ctx .  codex
- Akibatnya, walaupun role kau "owner", check dalam Fallback/WorkGroups tetap fail → keluar "not allowed". (WorkGroups pun check macam tu: access.hasRole(ctx, minRole) .)  codex

**PROMPT ARAHAN (betulkan sekali, 1 file sahaja)**

TASK: Fix AccessRoles service to accept ctx object (DEPLOYABLE, 1 file)

#### SCOPE

- Edit ONLY: OneBot/modules/Core/AccessRoles/AccessRolesCV.js
- ASCII-only. ZERO HARDCODE. No config changes.
- Output FULL RAW FILE BODY only.

#### GOAL

- Make AccessRoles service compatible with callers that pass ctx:
  - access.hasRole(ctx, role)
  - access.hasAtLeast(ctx, role)
  - access.isAllowed(ctx, role)
  - access.check(ctx, role)
  - access.meetsMinRole(ctx, role)

#### REQUIREMENTS

1) Add helper:

- principalFromAny(x):
  - if x is an object (ctx-like), return principalFromCtx(x)
  - else return normalizePrincipal(x)

2) Change getRole/hasAtLeast/hasRole to use principalFromAny:

- getRole(any) must resolve correct principal key even if "any" is ctx object.

3) Add service aliases (do not remove existing):

- meetsMinRole(ctx, minRole) => hasAtLeast(ctx, minRole)
- isAllowed(ctx, minRole) => hasAtLeast(ctx, minRole)
- check(ctx, minRole) => hasAtLeast(ctx, minRole)

4) Keep existing role command behavior unchanged (!role me / set / del / list).

#### OUTPUT FORMAT (STRICT)

##### CHANGED FILES

Path: OneBot/modules/Core/AccessRoles/AccessRolesCV.js

STOP.

Lepas deploy patch ni + restart, owner \*\*patut lulus\*\* `minRoleTicketReply=staff`

Sources

    ... Compare with Claude ▾**codex.txt**  
Document

Thought for 3m 15s &gt;

**TAK BOLEH copy/deploy** (kalau tujuan nak "owner = pass minRole staff").

Punca: `FallbackCV / WorkGroups` check permission guna `access.hasRole(ctx, minRole)` dulu  `codex`  `codex`, tapi `AccessRolesCV.js` sekarang implement `hasRole(any, reqRole)` sebagai **exact match** (owner != staff)  `codex` — jadi walaupun owner, masih "not allowed".

**PROMPT ARAHAN (betulkan 1 file sahaja)**

&lt;/&gt; Plain text

TASK: Fix AccessRoles hasRole semantics (DEPLOYABLE, 1 file only)

#### SCOPE

- Edit ONLY: OneBot/modules/Core/AccessRoles/AccessRolesCV.js
- ASCII-only. No config changes. No summary/testing/commit text.
- Output FULL RAW FILE BODY only.

#### GOAL

- Make access.hasRole(ctx, minRole) behave as MIN-ROLE ( $\geq$ ), not exact equality,
- Preserve exact-role checking by adding a new method (optional) e.g. isExactRole

#### REQUIREMENTS

- 1) Change hasRole(any, reqRole) to:  
return hasAtLeast(any, reqRole);
- 2) Add optional exact checker:  
function isExactRole(any, role) { return getRole(any) === normalizeRole(role,  
and expose as service.isExactRole
- 3) Keep existing methods and command behavior unchanged:  
getRole, hasAtLeast, meetsMinRole, isAllowed, check, list, role command handle

#### OUTPUT FORMAT (STRICT)

##### CHANGED FILES

Path: OneBot/modules/Core/AccessRoles/AccessRolesCV.js

codex.txt  
Document

Thought for 3m 46s >

**BOLEH copy & deploy (guna yang Create Time 6:34PM):**

- `OneBot/modules/Core/AccessRoles/AccessRolesCV.js`  `codex`  `codex`

### BOLEH copy & deploy (conf):

- `OneData/bots/ONEBOT/config/modules/Core/Impl/AccessRolesCV.conf`  `codex`

### JANGAN copy (versi lama hasRole "equal"):

- `AccessRolesCV.js` yang `hasRole(...)` guna `===`  `codex`

### NEXT PROMPT (kalau lepas deploy masih ada "not allowed")

TASK: Find remaining "not allowed" gate after AccessRoles fix (REPORT ONLY)

#### SCOPE

- REPORT ONLY. NO CHANGES.
- Verify which module still blocks commands and why (wrong group vs minRole).

#### MUST

- 1) Search for these exact strings in repo:
  - "You are not allowed to run this command."
  - "You are not allowed to reply."
- 2) For each hit:
  - output file path + line number
  - show which access function is called (hasRole/hasAtLeast/isAllowed/check)
  - show what minRole key/value is used from active conf
- 3) Confirm active AccessRoles service API:
  - `access.hasRole(ctx, role)` exists
  - confirm it uses MIN-ROLE semantics (`>=`) not exact match

#### OUTPUT

##### REPORT

- Hits + reasons

File

dah ok tapi ada certain masih belum berfungsi, tapi kita

nak terus ke squence mana ni, apa lagi yang belum siap?

Thought for 56s >

Ikut **sequence tracker** yang masih **belum siap** lepas apa yang kita dah buat sekarang:

- **6G – Anti-miss safeguards (reminders/escalation)**  ONEBOTREBUILDWORKFLOWTRACKER
- **6H – Audit / Journal view commands**  ONEBOTREBUILDWORKFLOWTRACKER
- **Optional lepas semua stabil:**
  - **7A – Contact/Account/Context Book (ACC+PIC+CTX)** (ini yang kau explain pasal contact/account + filing/media saving)  ONEBOTREBUILDWORKFLOWTRACKER  
 ONEBOT\_CONTACT\_ACCOUNT\_CONTEXT\_...
  - **7B – Send Policy**  ONEBOTREBUILDWORKFLOWTRACKER
- **Lepas stabil: Housekeeping + log control policy batch**  ONEBOTREBUILDWORKFLOWTRACKER

**Next sequence yang patut jalan sekarang: 6G.**  ONEBOTREBUILDWORKFLOWTRACKER

Sources

    ... Compare with Claude ▾

ok boleh tulis prompt untuk next squence sambung sampai habis, ada berapa lagi squence sampai habis?

Thought for 56s >

Tinggal 2 **sequence wajib** untuk "habis core rebuild":

1. **6G Anti-miss safeguards (reminders/escalation)**  ONEBOTREBUILDWORKFLOWTRACKER
2. **6H Audit / Journal view commands**  ONEBOTREBUILDWORKFLOWTRACKER

Lepas tu **optional / selepas stabil** (kalau kau nak teruskan sampai "habis semua add-ons + kemas"):

- 3) **7A Contact/Account/Context Book**  ONEBOTREBUILDWORKFLOWTRACKER
- 4) **7B Send Policy**  ONEBOTREBUILDWORKFLOWTRACKER
- 5) **Housekeeping**  ONEBOTREBUILDWORKFLOWTRACKER
- 6) **Log control policy batch**  ONEBOTREBUILDWORKFLOWTRACKER

Jadi total: 2 wajib + 4 selepas stabil = 6.

Di bawah ni **PROMPT** untuk **NEXT SEQUENCE (6G)** (satu prompt sahaja, ikut style copy/paste deploy):

TASK: 6G Implement Anti-miss safeguards (reminders + escalation) - DEPLOYABLE

#### SCOPE

- Implement ONLY 6G:
  - Reminders for unreplied OPEN DM tickets (no spam)
  - Escalation after maxAttempts (no spam)
- ASCII-only. ZERO HARDCODE (no IDs/text/prefix/template/conf paths in JS).
- Do NOT touch keyname.conf.txt. Do NOT output keyname audit/list.
- Do NOT edit Start.cmd, OneBot/Kernel.js, OneBot/Connector.js, any \*Hub.js logic
- Output MUST be copy/paste deploy: FULL RAW FILE BODY only. No Summary/Testing/c

#### FILES TO OUTPUT (MAX 2, EXACT PATHS)

- 1) OneBot/modules/Core/Fallback/FallbackCV.js
- 2) OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf (ONLY if missing)

#### MUST (NO GUESSING)

- 1) Follow active pointers (must use ON-DISK active implFile+implConfig):
  - OneData/bots/ONEBOT/config/modules/Core/Fallback.conf
  - > OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf (implFile + implCo
- 2) Preserve existing features in current on-disk FallbackCV.js:
  - 6C ReplyMedia, 6D ReplyAV, 6E bind/move routing, 6F quick replies + QR place
  - Do NOT remove any deps wiring already present.
- 3) Use ONLY existing config keys already present in active FallbackCV.conf for 6G
  - tickMs
  - delayMs
  - dueBatchMax
  - maxAttempts
  - controllers (optional)

If any of tickMs/delayMs/dueBatchMax/maxAttempts are missing in the active con

  - Add them to FallbackCV.conf (append-only) with SAFE defaults:
    - tickMs=60000
    - delayMs=3600000
    - dueBatchMax=5
    - maxAttempts=3
  - Do NOT add any other new keys.
  - controllers is OPTIONAL; leave blank if unknown.

#### IMPLEMENTATION RULES (FallbackCV.js)

##### A) Reminder state (NO schema drift)

- Use in-memory Map reminderState keyed by ticketId:
  - { sentCount, escalated, nextAtMs }
- Do NOT write reminder fields into the ticket object unless ticket already has s

##### B) When to schedule

- On DM inbound that creates/updates an OPEN ticket:
  - set reminderState[ticketId].nextAtMs = now + delayMs

- reset escalated=0 if ticket reopened (if your code has reopen logic)

#### C) Clear on staff reply

- When a staff reply to customer succeeds (text/media/av paths you already have):
  - clear reminderState[ticketId]

#### D) Reminder tick loop (AUTO)

- Add a single timer in FallbackCV.js:
 

```
setInterval(runReminderTick, tickMs)
```
- runReminderTick:
  - 1) Load ticket list from existing ticket store (same storeSpec/key used today)
  - 2) Filter OPEN tickets only (same closed value already used by current code)
  - 3) Select due tickets where now >= nextAtMs (and not escalated)
  - 4) Limit per run to dueBatchMax
  - 5) For each due ticket:
    - Render existing ticket card output ONLY (no new text/templates in JS)
    - Send into target group using groupKey routing:
 

```
ticket.groupKey first, else cfg.defaultGroupKey
```
    - Send options MUST be AUTO and polite:
 

```
{ isAuto: 1, bypassRateLimit: 0, manualReply: 0, lastInboundAtMs: <best-ef
```

      - lastInboundAtMs:
        - If MessageJournal service can provide last inbound for this customer c
        - Else fallback to ticket.updatedAt (ms) parsed from ISO, else Date.now()
    - Update reminderState: sentCount++, nextAtMs = now + delayMs
    - If sentCount >= maxAttempts:
      - set escalated=1 and nextAtMs = VERY\_LARGE (stop further reminders)
      - OPTIONAL escalation ping:
        - If cfg.controllers non-empty, send ONE additional message containing 0

#### E) No hardcoded RateLimit conf path

- Do NOT load RateLimit conf via a literal path string.
- Do NOT implement window gating unless you can prove existing config keys already

#### F) Safety

- No double-send per ticket in a single tick.
- No spam: dueBatchMax + maxAttempts strictly enforced.

#### OUTPUT FORMAT (STRICT)

##### CHANGED FILES

Path: OneBot/modules/Core/Fallback/FallbackCV.js

codex.txt

Document

Thought for 1m 53s &gt;

**TAK BOLEH copy/deploy** untuk set **Create Time 5:02PM** tu.

Sebab (evidence dari code yang kau paste):

- `access.hasRole(userId, role)` dalam `AccessRolesCV.js` adalah **exact match** (`===`) dan **expect userId string**, sedangkan modul lain guna pattern **minRole** + kadang pass `ctx` → ini akan buat "owner" masih boleh kena block untuk command `minRole staff/manager`.

## PROMPT ARAHAN (betulkan, 1 file sahaja)

TASK: Fix AccessRoles service semantics (ctx-compatible + min-role hasRole) (DEPL

### SCOPE

- Edit ONLY: `OneBot/modules/Core/AccessRoles/AccessRolesCV.js`
- ASCII-only. No config changes. No summary/testing.
- Output FULL RAW FILE BODY only.

### REQUIREMENTS

- 1) Add `principalFromAny(x)`:
  - If `x` is an object (ctx-like), derive principal using existing `principalFromCtx()`
  - Else `normalizePrincipal(x)`
- 2) Make `getRole/hasAtLeast/hasRole` accept ctx OR string:
  - `getRole(any)` must call `principalFromAny(any)`
  - `hasAtLeast(any, minRole)` uses `roleRank(getRole(any)) >= roleRank(minRole)`
- 3) Change `hasRole(any, reqRole)` to MIN-ROLE semantics:
  - `hasRole(any, reqRole)` MUST return `hasAtLeast(any, reqRole)`

- Add a new exact checker:  
`isExactRole(any, role) => getRole(any) === normalizeRole(role, defaultRole)`
- Keep existing command behavior unchanged (!role me/set/del/list)

4) Keep existing service export name:

- `meta.registerService('access', service)` stays the same

OUTPUT FORMAT (STRICT)

Document

Thought for 1m 16s >

**TAK BOLEH copy/deploy (Create Time 5:02PM).**

- AccessRolesCV.js masih `hasRole()` **exact match** (owner boleh fail bila module lain guna `minRole`).
- `ownerSeedList` dalam conf masih **tak match** `idKey ...@lid` (bootstrap boleh tak jadi).

**PROMPT untuk Codex betulkan (DEPLOYABLE, 2 files)**

TASK: Fix AccessRoles (ctx-compatible + min-role hasRole + seed match) (DEPLOYABLE)

SCOPE

- Fix ONLY these 2 files:

- 1) OneBot/modules/Core/AccessRoles/AccessRolesCV.js
  - 2) OneData/bots/ONEBOT/config/modules/Core/Impl/AccessRolesCV.conf
- ASCII-only. ZERO HARDCODE. Output FULL RAW FILE BODY only. No summary/testing/c

#### REQUIREMENTS (AccessRolesCV.js)

##### 1) Add principalFromAny(x):

- if x is an object (ctx-like), derive principal using existing principalFromCtx()
- else normalizePrincipal(x)

##### 2) Update role API to accept ctx OR string:

- getRole(any) uses principalFromAny(any)
- hasAtLeast(any, minRole) uses roleRank(getRole(any)) >= roleRank(minRole)
- hasRole(any, reqRole) MUST behave as MIN-ROLE (>=):  
hasRole(any, reqRole) => hasAtLeast(any, reqRole)
- Add exact checker:  
isExactRole(any, role) => getRole(any) === normalizeRole(role, defaultRole)

##### 3) Keep existing command behavior unchanged:

- !role me / set / del / list must still work.
- msgMe must continue to support {role} and {idKey}.

#### REQUIREMENTS (AccessRolesCV.conf)

- Update ONLY ownerSeedList to include BOTH formats (comma-separated):  
ownerSeedList=82828612100333@lid,lid:82828612100333
- Keep all other lines unchanged.

#### BOLEH copy & deploy (Create Time 8:54PM):

- OneBot/modules/Core/AccessRoles/AccessRolesCV.js
- OneData/bots/ONEBOT/config/modules/Core/Impl/AccessRolesCV.conf

TASK: 6G Implement Anti-miss safeguards (reminders + escalation) - DEPLOYABLE

#### SCOPE

- Implement ONLY 6G:
  - Reminders for unreplied OPEN DM tickets (no spam)
  - Escalation after maxAttempts (no spam)
- ASCII-only. ZERO HARDCODE (no IDs/text/prefix/template/conf paths in JS).
- Do NOT edit keyname.conf.txt. Do NOT output keyname audit/list.
- Do NOT edit Start.cmd, OneBot/Kernel.js, OneBot/Connector.js, any \*Hub.js logic
- Output MUST be copy/paste deploy: FULL RAW FILE BODY only. No Summary/Testing/c

#### FILES TO OUTPUT (MAX 2, EXACT PATHS)

- 1) OneBot/modules/Core/Fallback/FallbackCV.js

2) OneData/bots/ONEBOT/config/modules/Core/Impl/FallbackCV.conf (ONLY if you mus

#### ARAHAN KERAS (NO GUESSING)

1) Follow active pointers on disk:

OneData/bots/ONEBOT/config/modules/Core/Fallback.conf

-> OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf (implFile + implCo

2) Start from CURRENT on-disk active FallbackCV.js (must preserve existing 6C/6D/

3) Use ONLY existing keys in active FallbackCV.conf for 6G controls:

tickMs, delayMs, dueBatchMax, maxAttempts, controllers(optional)

- If any of tickMs/delayMs/dueBatchMax/maxAttempts missing in active conf:

append them with SAFE defaults:

tickMs=60000

delayMs=3600000

dueBatchMax=5

maxAttempts=3

(append-only, no duplicates)

#### IMPLEMENTATION (FallbackCV.js)

- Reminder state: in-memory Map reminderState[ticketId] = { sentCount, escalated,
- On DM inbound OPEN ticket: set nextAtMs = now + delayMs
- On successful staff reply to customer (text/media/av): clear reminderState[tick
- Timer: setInterval(runReminderTick, tickMs) after init success
- runReminderTick:
  - load tickets from existing ticket store
  - filter OPEN DM tickets only
  - select due where now >= nextAtMs and not escalated
  - limit per tick to dueBatchMax
  - send ONLY existing ticket card output (no new strings)
  - target group MUST use ticket.groupKey first else cfg.defaultGroupKey
  - send options MUST be AUTO:
 

```
{ isAuto:1, manualReply:0, bypassRateLimit:0, lastInboundAtMs:<best-effort> }
```

    - lastInboundAtMs: use ticket.updatedAt ms if available; else Date.now()
  - update state: sentCount++, nextAtMs = now + delayMs
  - if sentCount >= maxAttempts:
    - escalated=1, stop repeats (do NOT double-send same tick)
    - OPTIONAL: if cfg.controllers not empty, send ONE extra message containing ONL

#### PROHIBITED

- No hardcoded RateLimit conf path loads.
- No disable-module gates due to missing optional keys.
- No double-send per ticket per tick.

cuba check kenapa dia hanta wire 7 semula, tadi wire fallback 8 sekejap 7 sekejap 8 ada bagi arahan salah ke

Thought for 1m 41s &gt;

Bukan arahan kau yang "salah". Yang jadi **wire 7 ↔ 8** tu biasanya sebab **Codex start dari baseline file yang berbeza** (kadang ambil `FallbackCV.js` yang belum merge feature sebelumnya), jadi bila dia output balik, **satu wiring hilang** (contoh `ReplyAV` / `bind-move` / `quick deps`) → kiraan wire turun.

Tapi untuk **confirm tepat "wire mana yang hilang"**, aku **tak boleh audit dari** `codex.txt` yang kau bagi sekarang sebab itu cuma ada **AccessRoles** (tiada `FallbackCV.js` / `FallbackReplyRouterCV.js`). Jadi aku tak ada bukti dalam teks ni untuk tunjuk "yang drop" tu yang mana.

Kalau kau nak settle terus (supaya tak ulang 7/8 lagi), guna rule ni untuk semua task yang sentuh fallback:

- **Codex WAJIB start dari on-disk active** `FallbackCV.js` (ikut pointer `FallbackHub.conf`)
- Dalam output `FallbackCV.js`, bahagian `replyRouter.create({ ... })` **mesti kekal ada semua deps yang router panggil**. Kalau router ada panggil `deps.sendReplyAV` / `deps.onBindTag` / `deps.onQuickSend`, tapi `create({...})` tak wire, itu yang buat wire drop & feature mati.

Kalau kau paste nanti (1 kali je) **2 block ini** dari output Codex yang bermasalah:

1. FallbackCV.js bahagian `replyRouter.create({ ... })`

2. FallbackReplyRouterCV.js bahagian yang panggil `deps.*`

aku boleh terus jawab ringkas: wire mana hilang → sebab apa → prompt betulkan (1 prompt, 1–2 file).

    ... Compare with Claude ▾

AccessRolesCV.js  
JavaScript

FallbackGroupRouterCV.js  
JavaScript

FallbackCV.js  
JavaScript

FallbackHub.conf  
File

ni yang sedang running sekarang dekat server..

Thought for 3m 9s >

Bukan arahan kau salah. Server kau memang sedang guna “FallbackCV 7-wire” (sebab tak ada ReplyAV wiring), jadi bila Codex start dari file active ni, dia akan jatuh balik jadi 7.

**Bukti dari file yang sedang running (FallbackCV.js):**

- FallbackCV.js sekarang **tak import** `FallbackReplyAVCV` — dia cuma require sampai `FallbackReplyMediaCV` sahaja.  FallbackCV
- Dalam `replyRouter = FallbackReplyRouterCV.create({...})`, dia hanya wire `sendReplyText` + `sendReplyMedia` (tiada `sendReplyAV`, tiada `bind/move/quick`).  
 FallbackCV

**Bukti versi 8-wire yang pernah ada (ReplyAV wujud):**

- Dalam output lain, ada `sendReplyAV: async (...)` => `FallbackReplyAVCV.sendToCustomer(...)`.  codex

Jadi “7 ↔ 8” jadi bila:

- Codex kadang start dari `FallbackCV.js` yang dah ada ReplyAV (8),
- kadang start dari `FallbackCV.js` yang running sekarang (7) → ReplyAV hilang balik.

---

**PROMPT (1 sahaja) untuk Codex: kunci balik 8-wire ikut file active sekarang**

TASK: Restore Fallback ReplyAV wiring (7->8) using active on-disk files (DEPLOYAB

#### SCOPE

- Edit ONLY these files (max 2):
  - 1) OneBot/modules/Core/Fallback/FallbackCV.js
  - 2) OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js (ONLY if router current
- ASCII-only. ZERO HARDCODE. Do NOT touch any \*Hub.js, Kernel.js, Connector.js, o
- Output FULL RAW FILE BODY only for changed files. No summary/testing text.

#### ARAHAN KERAS (NO GUESSING)

- 1) Confirm active pointers on disk:
  - OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf must point to:  
implFile=modules/Core/Fallback/FallbackCV.js
- 2) Verify file exists on disk:
  - OneBot/modules/Core/Fallback/FallbackReplyAVCV.js
  - If missing: REPORT ONLY "BLOCKED: missing FallbackReplyAVCV.js" and STOP (no

#### IMPLEMENT (FallbackCV.js)

- Start from the CURRENT on-disk active FallbackCV.js (do not replace with older
- Add require:
 

```
const FallbackReplyAVCV = require('./FallbackReplyAVCV');
```
- In replyRouter = FallbackReplyRouterCV.create({ ... }):
  - Add dependency sendReplyAV similar to sendReplyMedia:
 

```
sendReplyAV: async ({ ticketId, staffMsg, captionText, source, options }) =>
            return FallbackReplyAVCV.sendToCustomer({
              cfg, meta, store,
              ticketStoreKey: ticketRef.key,
              ticketId, staffMsg, captionText, source, options
            });
```
- Do NOT remove existing wires (sendReplyText/sendReplyMedia/canReply/sendStaffRe

#### IMPLEMENT (FallbackReplyRouterCV.js) ONLY IF NEEDED

- Ensure router detects audio/video/ptt and dispatches to deps.sendReplyAV with:
 

```
options: { isAuto:0, manualReply:1, bypassRateLimit:1 }
```
- Keep existing text + image/document media flow unchanged.
- Do not introduce new config keys.

#### OUTPUT FORMAT (STRICT)

##### CHANGED FILES

Path: OneBot/modules/Core/Fallback/FallbackCV.js

```
```js
```

⟨⟩ Plain text

STOP.

Kalau lepas ni masih flip 7/8, itu tanda Codex masih “ambil baseline lain” (bukan

Sources

Compare with Claude ▾

codex.txt  
Document

Thought for 2m 4s &gt;

Bukan arahan kau salah — **server kau sekarang memang running “7-wire”** sebab `FallbackCV.js` yang aktif **tak ada ReplyAV wiring langsung**.

**Evidence (running file yang kau upload):**

- `FallbackCV.js` **tak import** `./FallbackReplyAVCV` (import list setakat `ReplyMedia`).  
 `FallbackCV`
- Dalam `replyRouter = FallbackReplyRouterCV.create({ ... })`, dia **wire setakat** `sendReplyText` + `sendReplyMedia` sahaja — **tak ada** `sendReplyAV`.  `FallbackCV`

Padahal **handler ReplyAV memang wujud** (repo ada `FallbackReplyAVCV.js`).

 `FallbackReplyAVCV`

Jadi bila Codex “flip” 8→7, itu biasanya sebab dia **start dari baseline active on-disk** (yang memang 7-wire), lalu overwrite balik.

## PROMPT untuk Codex (kunci balik 8-wire, deployable)

TASK: Restore ReplyAV wiring into ACTIVE Fallback (7->8) using on-disk files (DEP

## SCOPE

- Fix ONLY to add ReplyAV (audio/video/ptt) reply support.
- ASCII-only. ZERO HARDCODE (no IDs/text/conf paths in JS).
- Do NOT touch Hub/Foundation (\*Hub.js, Kernel.js, Connector.js).
- Output FULL RAW FILE BODY only for changed files (copy/paste deploy). No report

## MUST (NO GUESSING)

1) Confirm ACTIVE pointer on disk:

OneData/bots/ONEBOT/config/modules/Core/FallbackHub.conf -> implFile=modules/C

2) Confirm file exists on disk:

OneBot/modules/Core/Fallback/FallbackReplyAVCV.js

- If missing: REPORT ONLY "BLOCKED: missing OneBot/modules/Core/Fallback/Fallb

## FILES TO OUTPUT (MAX 2)

1) OneBot/modules/Core/Fallback/FallbackCV.js

2) OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js (ONLY if router does not

## CHANGES REQUIRED

A) In FallbackCV.js (start from CURRENT on-disk file, do not replace):

- Add:

```
const FallbackReplyAVCV = require('./FallbackReplyAVCV');
```

- In replyRouter = FallbackReplyRouterCV.create({ ... }):

- Add deps.sendReplyAV closure similar to sendReplyMedia:

```
sendReplyAV: async ({ ticketId, staffMsg, captionText, source, options }) =>
  return FallbackReplyAVCV.sendToCustomer({
    cfg, meta, store,
    ticketStoreKey: ticketRef.key,
    ticketId, staffMsg, captionText, source, options,
  });
}
```

- Do NOT remove existing wires (sendReplyText/sendReplyMedia/canReply/sendStaffRe

B) In FallbackReplyRouterCV.js (ONLY if missing):

- Detect AV types via ctx.message.type or ctx.message.\_data.type in { audio, vide

- Dispatch AV replies to deps.sendReplyAV with:

```
options { isAuto:0, manualReply:1, bypassRateLimit:1 }
```

- Keep existing text/media flows unchanged.

## OUTPUT FORMAT (STRICT)

## CHANGED FILES

Path: OneBot/modules/Core/Fallback/FallbackCV.js

Kalau lepas Codex bagi output, paste sini – aku akan jawab ringkas macam biasa: \*

Sources

    ... Compare with Claude ▾

**codex.txt**  
Document

kau dapat baca tak codex.txt Create Time: 1:49AM? kalau tgk dah ada 8 wire tapi kau cakap ada 7 je kau salah baca ke, codex.txt ni semua file sama, isi kandungan Create Time: 1:49AM ni yang berbeza cuba kau check semula dan jangan buat kerja main2 penat aku ulang hantar dan buat benda sama ni

Thought for 1m 40s >

Aku dah check semula — kau betul.

**Dalam codex.txt Create Time 1:49AM memang “8-wire” (ada ReplyAV):**

- Dia `require('./FallbackReplyAVCV')` .  codex
- Dan dalam `replyRouter.create({...})` ada `sendReplyAV: async (...)` => `FallbackReplyAVCV.sendToCustomer(...)` (sekali dengan bind/move/check).  codex

**Kenapa aku pernah cakap “7-wire”?**

Sebab aku rujuk file yang kau upload sebagai “yang sedang running dekat server” (`FallbackCV.js`) — dalam file tu `replyRouter.create({...})` tak ada `sendReplyAV`, dia wire setakat `sendReplyText` + `sendReplyMedia` sahaja.  FallbackCV

(Ini sama macam report Codex Create Time 11:52PM yang kata tiada ReplyAV wiring.

 codex )

**Maksudnya:** bukan aku salah baca, tapi server kau masih guna versi 7-wire (tak deploy 1:49AM, atau sudah overwrite lepas tu).

Kalau kau nak "lock" balik ke 8-wire, copy/deploy **2 file body** daripada section 1:49AM:

- OneBot/modules/Core/Fallback/FallbackCV.js  codex
- OneBot/modules/Core/Fallback/FallbackReplyRouterCV.js (yang ada dispatch  
deps.sendReplyAV ).  codex

FallbackReplyRouterCV.js  
JavaScript

sebelum saya guna prompt boleh check dulu tak router ni dah betul ke

Thought for 2m 42s >

Router **OK** — dia memang ada **AV dispatch** (audio/video/ptt) ke `deps.sendReplyAV`

 FallbackReplyRouterCV dan detect media ikut `msg.hasMedia + msg.type/_data.type`  
 codex .

**TAPI** router ni **wajib** dipasangkan dengan `FallbackCV.js` yang **wire** `sendReplyAV`. Kalau `FallbackCV.js` yang sedang running kau sekarang cuma `wire sendReplyText + sendReplyMedia` (tanpa `sendReplyAV`)  `FallbackCV`, then **router ni akan crash** bila staff reply audio/video/ptt sebab dia terus panggil `deps.sendReplyAV(...)`

 FallbackReplyRouterCV .

### Kesimpulan ringkas:

- Boleh guna router ini  kalau `FallbackCV.js` yang kau deploy adalah versi **8-wire** (ada `sendReplyAV`).  codex
- Jangan deploy router ini seorang diri  kalau `FallbackCV.js` kau masih macam snippet yang tak ada `sendReplyAV`.  FallbackCV

Sources

    ... Compare with Claude ▾

FallbackCV.js  
JavaScript

FallbackReplyRouterCV.js  
JavaScript

ok cuba tgk aku pakai live dua ni ok tak?

Thought for 1m 0s >

**Ya, dua file live ni OK (compatible, tak crash) untuk reply text + media + AV.**

- Router memang akan panggil `deps.sendReplyAV` bila jenis `audio/video/ptt`, dan `FallbackCV.js` memang wire `sendReplyAV` dalam `replyRouter.create(...)`.  
 `FallbackCV`  `FallbackReplyRouterCV`
- Bind/move/quick **tak aktif** sebab router only run kalau `deps.onBindTag/onMoveTicket/onQuickTeach/onQuickSend` wujud, tapi `FallbackCV.js` tak wire `deps` tu.  `FallbackCV`  `FallbackReplyRouterCV`

[Sources](#)    ... [Compare with Claude](#) ▾

ok sekarang kalau dah ok adakah kau akan ulang lagi repair kedua file ni? masalah aku tengok dalam sesi ni berkali kali usik 2 file ni kita tak move on kenapa

Thought for 9s >

Tak. Kalau **dua file live ni dah confirm OK**, kita **LOCK** dan **tak usik lagi** kecuali ada bug baru yang memang proven datang dari dua file tu.

Kenapa sebelum ni nampak macam asyik usik 2 file sama?

- Sebab banyak sequence (6C/6D/6E/6F/6G) semua duduk dalam **Fallback pipeline**, jadi wiring memang selalu masuk `FallbackCV.js` + `FallbackReplyRouterCV.js`.
- Lagi satu, bila Codex output **mix version** (7↔8 wire), kita terpaksa re-align supaya router & deps tak crash.

**Mulai sekarang:** kita proceed terus ke **6G**, dan aku akan pastikan prompt 6G **hanya tambah logic reminder dalam FallbackCV.js** tanpa ubah router (router lock).

Jika ada output Codex lepas ni yang cuba modify router, aku akan terus flag **"JANGAN COPY ROUTER"** dan suruh Codex keluarkan semula **FallbackCV.js sahaja**.

    ... [Compare with Claude](#) ▾

ini last prompt kau dekat sesi ni, tolong buat hand over tracker macam mana cara kerja yang kau alami di sesi ni supaya sesi lain boleh carry on..aku akan hantar readme 4 file ni di group lain jadi kau kena explain keseluruhan dan di mana nak kena sambung, dan wajib minta repo scan report dulu sebelum mula kerja, bila sesi lain dah faham baru boleh sambung dekat mana stuck

Thought for 1m 31s >

Di bawah ni **handover tracker** sesi ini (boleh paste ke group lain). Ia ikut rules dalam tracker: **scan repo dulu, satu TASK saja per round, jangan teka.**

ONEBOTREBUILDWORKFLOWTRACKER

## 0) Dokumen rujukan yang mesti ikut

- **READMEBUILD.txt** = niat binaan + kontrak module/pipeline (source of truth).  
 READMEBUILD
- **ONEBOTREBUILDWORKFLOWTRACKER.txt** = sequence kerja + cara kerja ChatGPT/Codex (wajib).  ONEBOTREBUILDWORKFLOWTRACKER
- **keyname.conf.txt** = rujukan canonical keynames untuk elak drift/alias (jangan reka key sesuka hati; kalau missing, propose & STOP).  ONEBOTREBUILDWORKFLOWTRACKER  
 keyname.conf
- **contactNaccount.txt** = spec optional 7A (ACC/PIC/CTX + filing/media saving profesional).  contactNaccount  contactNaccount

## 1) Cara kerja yang berlaku dalam sesi ini (pattern yang wajib ikut untuk elak ulang)

Masalah utama sesi ini: output Codex kerap “flip” antara versi file (contoh Fallback wiring 7 vs 8) sebab Codex kadang start dari baseline file lain → feature hilang/regress.

Cara elak (contract):

- Deploy guna **LATEST OUTPUT RULE**: bila Codex output file lebih dari sekali, **hanya versi terakhir yang complete sah**.  ONEBOTREBUILDWORKFLOWTRACKER
- Deploy mesti ikut **PATH header + full file body**, bukan snippet terapung.  
 ONEBOTREBUILDWORKFLOWTRACKER
- Kalau ada “Summary/Testing/commit/PR/CONTRACT FAILED” → **TAK BOLEH DEPLOY**, minta “clean re-output only”.  ONEBOTREBUILDWORKFLOWTRACKER
- ChatGPT **buat satu TASK sahaja setiap round** (jangan 2 prompt).  
 ONEBOTREBUILDWORKFLOWTRACKER

**Nota “Create Time”**: Dalam praktik group kita, guna “Create Time: XXXX” untuk bezakan codex.txt sebab nama file sama. (Tracker formal guna “LATEST output” + PATH; Create Time adalah label kerja kita.)

## 2) Apa yang dah stabil / siap dalam sesi ini (high-level)

- Akses/Role gating diselesaikan supaya modul lain yang pass ctx boleh check role (min-role) tanpa “not allowed” palsu. (Pastikan tak revert semula ke hasRole “exact match”).)

- Fallback reply router + reply AV/media/text pernah stabil, tapi sering regress bila Codex overwrite baseline.

### 3) Di mana perlu sambung sekarang (sequence yang tinggal)

Wajib tinggal (core rebuild):

- **6G Anti-miss safeguards (reminders/escalation)**  ONEBOTREBUILDWORKFLOWTRACKER
- **6H Audit / Journal view commands**  ONEBOTREBUILDWORKFLOWTRACKER

Lepas semua stabil (optional):

- **7A Contact/Account/Context Book** (guna spec contactNaccount.txt; filing/media saving professional; multi PIC).  ONEBOTREBUILDWORKFLOWTRACKER  contactNaccount
- **7B Send Policy**, kemudian housekeeping + log control policy batch.  
 ONEBOTREBUILDWORKFLOWTRACKER

### 4) "Wajib minta repo scan report dulu" (ini TASK pertama untuk sesi baru)

Gunakan TASK ini dulu sebelum sambung 6G/6H. Ia juga isi keperluan README: **Active Module Inventory & Rebuild Status table** mesti diisi hasil repo scan.  READMEBUILD

 READMEBUILD

**TASK: REPO SCAN REPORT (MANDATORY FIRST STEP) - ACTIVE MODULE INVENTORY + POINTER**

SCOPE

- REPORT ONLY. NO CODE/CONF CHANGES.
- MUST scan full repo on disk (do not guess).
- Output must list ACTIVE modules only (Core/<Module>.conf enabled=1 + valid Hub
- Fill the README sections:
  - A) Active Module Inventory
  - B) Rebuild Status (DONE/PENDING) based on actual active runtime pointers.

MUST

- 1) For every enabled Core/<Module>.conf:
  - show: entryConf path, hubConf path, implFile, implConfig, primary service name,
- 2) Confirm active pointer chains for these critical modules:
  - Global, Command, AccessRoles, JsonStore, SendQueue, Outbox, OutboundGateway, Ra
  - MessageJournal, Scheduler, WorkGroups, Fallback
- 3) For Fallback specifically:
  - list the 4x4 handlers present (Forward/Reply x Router/Text/Media/AV) and the ex

OUTPUT FORMAT

REPORT

- A) Active Module Inventory (one line per module)
- B) Rebuild Status (DONE/PENDING + 1-line reason)
- C) Critical pointer chains (exact paths)

⟨⟩ Plain text

## 5) Lepas scan report OK, ini urutan prompt seterusnya (satu-satu)

### Next: 6G (Anti-miss)

Ingat rule README: scheduled/auto mesti pass options.isAuto=1 + options.lastInboundAtMs (kalau ada). READMEBUILD

TASK: 6G IMPLEMENT (Anti-miss reminders + escalation) - DEPLOYABLE

SCOPE

- Implement ONLY 6G.
- ASCII-only, ZERO HARDCODE.
- Do NOT touch Start.cmd / Kernel.js / Connector.js / Hub.js. (frozen) :content
- Output FULL file bodies only. No report/summary.

FILES (MAX 2)

- 1) <active Fallback implFile from scan report>
- 2) <active Fallback implConfig from scan report> (ONLY if need append missing key

MUST

- Start from ACTIVE on-disk FallbackCV.js (preserve existing 6C/6D/6E/6F wiring;
- Scheduled reminder sends MUST use options.isAuto=1 and lastInboundAtMs best-eff
- No spam: batch limit + maxAttempts, no double-send in same tick.

⟨⟩ Plain text

### Then: 6H (Audit/Journal view)

TASK: 6H IMPLEMENT (Audit / Journal view commands) - DEPLOYABLE

SCOPE

- Implement ONLY 6H: list tickets, last activity, group/tag, last replied by; tra
- ASCII-only, ZERO HARDCODE.
- Use MessageJournal store/service if active per scan report.
- Output FULL file bodies only (max 3 files).

MUST

- Follow active pointers from scan report.
- Commands must be config-driven (no hardcoded command words).

</> Plain text

## 6) Nota penting untuk 7A (Contact/Account/Context Book)

Jangan buat sekarang kecuali 6G+6H DONE. 7A mesti ikut spec:

- Account/PIC/Context + ticket link fields, multi-PIC recognition.  contactNaccount  
 contactNaccount
- Filing/media saving under Accounts/ACC.../Contexts/CTX... (bukan campak bawah root).  contactNaccount

## 7) Nota kecil (supaya sesi baru tak "stuck" macam sesi ini)

- Bila Codex mula regress (wire turun/feature hilang), **STOP** dan minta **clean re-output ONLY** untuk file yang sama (tanpa ubah logic) ikut contract.  
 ONEBOTREBUILDWORKFLOWTRACKER
- Jangan buat dua TASK sekaligus; satu TASK per round.  ONEBOTREBUILDWORKFLOWTRACKER

Kalau sesi baru perlukan fail yang pernah ada dalam chat lama: **sebahagian upload lama memang boleh "expired"** (kena re-upload bila perlu).
